PREFACE

THE appearance of this Part in such close proximity to Part XX of the series is the result of a generous benefaction from U.N.E.S.C.O. It may indeed well be that this Part will be in the hands of subscribers before its nominal predecessor since, as it was a condition of the U.N.E.S.C.O. grant that it should appear before the end of the present year, work on Part XX, which is in its final stages, was held up to make this possible.

When it was known that a grant would be forthcoming to expedite the publication of the Oxyrhynchus papyri, it was decided to use it to assist the publication of a volume consisting entirely of literary texts—the first of its kind since Part XV—as many texts of the greatest interest were ready in manuscript awaiting publication. In this Part Mr. Lobel has put together all the fragments of Sappho and Alcaeus and of commentaries on their poems which he has identified in the Oxyrhynchus collection; no reader is likely to underestimate the skill and patience this has required. It will be observed that the volume has no *index verborum*; the reason for this departure from precedent is that as a complete edition of the poems and fragments of both poets is in active preparation and will include a complete index, to make a partial index here would have been wasted effort.

With Part XXII we shall return to the familiar pattern of the composite volume; it will include some fragments of Ionic poetry, and, among the extant literary texts, of Aeschylus and Terence, together with a number of documents of the Roman period.

It remains to thank the staff of the Oxford University Press not only for their accustomed skill and accuracy but for enabling us to place this volume in the hands of readers within less than a year of the date of their acceptance of the manuscript.

NOTE ON THE METHOD OF PUBLICATION AND LIST OF ABBREVIATIONS

The method of publication follows that adopted in earlier Parts. As there, the dots indicating letters unread and, within square brackets, the estimated number of lost letters are printed slightly below the line. Corrections and annotations which appear to be in a different hand from that of the original scribe are printed in thick type. Square brackets [] indicate a lacuna, round brackets () the resolution of a symbol or abbreviation, angular brackets $\langle \rangle$ a mistaken omission in the original, braces {} a superfluous letter or letters, double square brackets []] a deletion, the signs ' an insertion above the line. Dots within brackets represent the estimated number of letters lost or deleted, dots outside brackets mutilated or otherwise illegible letters. Dots under letters indicate that the reading is doubtful. Letters not read or marked as doubtful in the literal transcript may be read or appear without the dot marking doubt in the reconstruction if the context justifies this. Lastly, heavy Arabic numerals refer to Oxyrhynchus Papyri printed in this and preceding volumes, ordinary numerals to lines, smaller roman numerals to columns.

The abbreviations used in citing papyrological and other publications are, in the main, those adopted in previous Parts. Attention may perhaps be called to the following:

 $A\mu$. = Ε. Lobel, Aλκαίου Μέλη (Oxford, 1927).

 $\Sigma \mu$. = E. Lobel, Σαπφοῦς Μέλη (Oxford, 1925).

Milne = H. J. M. Milne, Catalogue of the Literary Papyri in the British Museum (London, 1927).

Mitt. P. E. R. = Mittheilungen aus der Sammlung der Papyrus Erzherzog Rainer (1887-).

P. Gr. Vind. = Papyrus Graeca Vindobonensis, in Mitteilungen aus der Papyrussammlung der Nationalbibliothek in Wien, by H. Gerstinger and others, 1932-.

Schubart, Pap. graec. = W. Schubart, Papyri Graecae Berolinenses (1911).

NEW CLASSICAL FRAGMENTS

2288. Ѕаррно, Воок і т

It is inferred, from the fact that Hephaestion adduces as a specimen of Sapphic hendecasyllable the verse which begins the poem preserved through its quotation by Dionysius of Halicarnassus, that this poem was the first in the first book. The same verse now reappears at the top of a column in the strip of papyrus, containing part of the same poem, here published, and to that extent lends support to the hypothesis. It is disappointing that the problem presented by ll. 18–19 cannot be resolved by the help of what the new manuscript offers there.

The writing is closely similar to that of **2076**, also a Sappho, and, if I had to state an opinion, I should say that though smaller it was by the same copyist. **2076** and **1809** (Plato, *Phaedo*) I likewise hold to be by the same hand. It is ascribed to the early second century.

- 19].., the tip of an upright well above the general level followed by what looks like the overhang of ϵ with a dot (prima facie a stop) below it on the line η appears to have been made out of $\epsilon \iota$. [, an upright with a trace of ink to left of its top; ν acceptable though not strongly suggested.
- I What appears to be a variant ποικιλοφρον, offered by some of the manuscripts of authors who quote the verse—I say 'appears', because the accentuation - $\delta \phi \rho$ found in every place suggests that mere error explains the occurrence—receives no support from this manuscript.

5 τύιδε always so accented (when the accent is shown) in book-texts of the two Lesbian poets,

e.g. 7, 2; 1231 1 ii 8 (Σμ. ā 3, 2; 6, 7).

8 δόμον . . . χρύσιον (not χρύσιον . . . ἄρμα), as the punctuation shows.

9 I am shown to have been wrong in printing $\partial \pi a \zeta \epsilon \omega \xi a \iota ca$ ($\Sigma \mu$. \bar{a} 1, 9 App.) on the analogy of $\zeta \epsilon \omega \xi \epsilon \iota ca$. This text implies that initial ζ , like any other, is written $\epsilon \delta$ when it becomes medial through composition.

II The sign implies διν[ν-, as cod. F of Dion. Halic. rightly spells (though it continues erro-

neously $-\hat{\eta}\nu\tau\epsilon\epsilon$ for $-\epsilon\nu\tau\epsilon\epsilon$).

14 μειδιαις- again rightly preserved by cod. F. Correct $\Sigma \mu$. \bar{a} 1, 14 App.

The first visible sign seems necessarily to be the top of ϕ or ψ and there is no room for a letter between this and the next, which seems to represent ϵ . The missing letter—there could scarcely have been more than one—at the beginning of the line must therefore have been a vowel. I can suggest nothing within the conditions but $\delta \psi$ ϵ' . $\tau' \nu a \delta \eta \bar{\nu} \tau \epsilon \pi \epsilon i \theta \omega \delta \psi$ $\epsilon' \delta \gamma \eta \nu \epsilon' \epsilon \epsilon \gamma \delta \nu \phi i \lambda \delta \tau \alpha \tau \alpha$; is not unacceptable in itself but it necessitates a change in the only evidence we have $(\epsilon \Delta \nu)$ and the neglect of the stop which seems to be recorded in this manuscript after ϵ' . The discrepancy between $\delta \psi$ and $\delta \mu \alpha \nu$ may be thought of little weight, since $\delta \mu \alpha \nu$ might be merely a duplication of the first syllable of $\delta \mu \alpha \nu \nu \delta \lambda \alpha \nu$.

I should add that it strikes me as strange that the α of $\tilde{\alpha}\gamma\epsilon\iota\nu$ should be thought to require a mark of length and an accent. I have consequently entertained the notion that $\tilde{\alpha}\gamma\eta\nu$ means $\tilde{\alpha}\gamma\hat{\eta}\nu\alpha\iota$ but I

can adduce no use of ayvum which provides an acceptable solution to the problem.

2289. Sappho, Book i

It is natural to seek in the first book of Sappho's poems the provenance of Sapphic stanzas in the Lesbian dialect and the identification of fr. 9 of the following with certainty and of fr. 6 with fair probability is quickly made. This is the sixth manuscript (or seventh, if we include the ostrakon published in *Ann. R. Sc. Norm. sup. Pisa* (Lett., &c.) Ser. II vol. vi (1937) i 8 seqq.) containing parts of that book. It cannot be said to add much to our knowledge and in two places (frr. 2, 5 and 4, 1) it brings new darkness.

The hand is a small uncial approximating to the common angular but still retaining some features of the second-century round type. I suppose it may be dated in the later second century. Cf. 2080.

Two pens appear to be distinguishable in the additions to the text. One may well be that of the original copyist, to whom I am inclined to ascribe the interlinear and marginal writing at frr. 2, 5 and 7; 4, 6.

Fr. 1 There is no doubt that (a) stood vertically above (b) and I am fairly confident that they actually touch (just below the stichometrical ϵ in the left margin) but there is a possibility that there was some interval between them I. [, a trace on the line, perhaps the start of a stroke rising to right 3 τp made out of something different, perhaps π 4 Of a only traces of the upper left-hand side of the apex. The ink which follows is what has soaked through the top layer, which is lost 6 Perhaps a is meant but a has a distinct slope to right 9 Of a only the extreme left-

hand tip of the cross-stroke .[, the foot of a stroke rising with a slight slant to right with a dot above it level with the tops of the letters 10 .[, the apex of α , δ or λ ; hardly ν 11 The cross-stroke of π is not horizontal but I doubt whether ν or τ is more probable 13]., the right-hand end of the cross-stroke of γ or τ 14 Or α [.] α [15 The tip of an upright

- Fr. 2 1]., I think χ but cannot rule out κ .[, the lower part of an upright descending below the line, ϕ suggested].[, the tail of an upright descending below the line with a trace above to its right 2 Between ϵ and τ a dot on the line and a horizontal stroke touching τ below its crossstroke, e.g. $\lambda \epsilon$.[, parts of an upright descending below the line, ρ acceptable 3 ι seems to be an insertion made currente calamo 5 The last ι has an unusual serif to the left of its foot, but ω (for $\epsilon \iota$) would also be anomalously made and inconsistent with the accent 6]., a dot level with the tops of the letters [.], presumably ι 7 $\tilde{\alpha}$.[, apparently the start of a stroke ascending to right
- Fr. 3 Perhaps from the same neighbourhood as fr. 2 I], the bottom of a curved stroke meeting the bottom of an upright; perhaps ϵ made into ι or vice versa, but other interpretations open After ν the lower part of an upright After \circ the lower part of ϵ or ϵ 2 [, a trace perhaps compatible with \circ or ω 3 [, the lower part of an upright 4], the upper part of an upright
- Fr. 4 1 [, prima facie λ but I cannot rule out ν 5]., perhaps ρ 6]., the top of an upright followed at an interval by a dot which may represent the top of another; between them what looks like a small o above the general level [, μ appears to me more likely than ν , but I cannot rule this out 8]., γ or τ 9. [, a or δ
- Fr. 5 1 seq. appear to be written smaller than the others 3 :[, perhaps 'i[' most likely, though one would expect i to be taller 5 Or ..[; two dots level with the top of the letters.
- Fr. 6 4]., the right-hand end of a cross-stroke suggesting ϵ .[, an upright with its top hooked over to left, perhaps π
- Fr. 7 1]., the right-hand part of a cross-stroke as of γ or τ but no trace of an upright upright with the foot slightly hooked to right, apparently c 3]., an upright, ν suggested 4 Perhaps the top of a circle
- Fr. 8 I Only the bottoms of letters; I should guess $\phi\iota\nu$ but the traces could be combined to give several alternatives 2 .[, γ or the left-hand part of π 5]., traces compatible with ζ 6]., the right-hand ends of the arms of κ or χ 8].., χa would suit but of χ only the right-hand tips of the upper and lower arms and δ is not ruled out in place of α .[, perhaps the left-hand bottom angle of α or δ 9].!, I believe, $\alpha\iota$, but I am not sure that a single ν is impossible
 - Fr. 9 3 .[, the left-hand end of a horizontal stroke to right of the lower part of ι
 - **Fr. 10** 3 '.[, ϵ or δ followed by the top of a loop; ρ one possibility
- Fr. 11 1], the right-hand end of a cross-stroke as of γ 3].., three letters might be represented, of which the second and third might be α or α rather crushed together 4]., the right-hand end of a cross-stroke touching the top of α 5. [, α or perhaps γ .
- Fr. 1 4 If $\bar{\epsilon}$ is, as it must be taken to be, a stichometrical note, it should stand in a copy of the first book of Sappho's poems opposite the last line of a stanza (500 = 4×125), not as here opposite the second. I cannot explain this inconsistency, if it is not due to mere error.

7 seq. $\Sigma \mu$. \bar{a} 16, 7 seqq. $c\tau \epsilon \hat{i}\chi \epsilon \dots [\dot{\omega}c?] \dots \ddot{i}\delta \omega \mu \epsilon \nu$

9 $\epsilon \tau a [\iota \rho$ - appears to be ruled out, apparently $\epsilon \tau \iota [$ or possibly $\epsilon \tau \iota [$

Fr. 2 1 Possibly Δωρί]χας 2 ΄]κην κέλετ', οὐ γὰρ[

4 For the possibility of ε]κάνην see Άμ. xiii n. 1. δφλις]κάνην would not scan here. ἀγερωχία heretofore only late; for the adjective ἀγέρωχος in Sappho see 2293 fr. 1(a) iii 12 n.

 $5 \in]\mu\mu\epsilon\nu$ one possibility but there are others (1st p. plur. pres. or impf. ind., perf. part. pass., etc.). $\delta a(\nu)$ is puzzling. The context suggests that it is equivalent to $\delta a(\nu)$, but $\delta a(\nu)$ is not normally reduced in dissyllables (A μ . lvi seq.) and $\delta a(\nu)$ actually occurs in Alcaeus D 14, 12. Moreover, $\tau \delta a(\nu)$ to $\tau \delta a(\nu)$ appears as $\tau \epsilon a(\nu)$ not $\tau \delta a(\nu)$. The various senses of the ordinary $\delta a(\nu)$ do not seem to be wanted here.

Fr. 3 3 [4]τθι

Fr. 4 I No syllable is missing at the beginning of the line. π] $a\rho\kappa\dot{a}\lambda\epsilon\iota c\iota$ was certainly not written. I am at a loss to explain the text. A verb might end in $-\lambda\dot{\eta}o\iota$ (ἀδικήει $\Sigma\mu$. \bar{a} I, 20 App., $\pi o\theta\dot{\eta}\omega$ \bar{a} 8 App.) and $\kappa a\lambda\dot{\eta}\omega$ is said to be Aeolic, though only $\kappa\dot{a}\lambda\eta\mu\mu$ occurs in our texts ($\lambda\mu$. xliii). An adjective might end in $-\lambda\eta o\iota$ or $-\lambda\eta\iota o\iota$ ($\lambda\mu$. liv, 2165 fr. I, 6). To separate $\lambda\epsilon\hat{\iota}o\iota$, supposing that to be a correct Lesbian form, leaves the unmanageable] $a\rho\kappa a$ (preceded by o-3 consonants).

2 The short a points to $\pi \acute{a}\nu$, short in Lesbian, or a compound.

6 $\tilde{\epsilon}\omega c$ corresponding to $\hat{a}c$ (or $\theta \hat{a}c$)?

Fr. 6 The vertical relation of $\nu\eta$ in l. 1 to $\kappa\dot{\nu}$ (which may well be $\epsilon\kappa\dot{\nu}\pi$) in l. 4 and the situation of the short line, l. 2, with respect to them make it reasonable to identify here $\Sigma\mu$. \bar{a} 3, 15–18.] ϵ o[of l. 3 will fall in the gap between] $\nu \alpha \iota \kappa$ [and]. ι of $\Sigma\mu$. \bar{a} 3, 17.

Fr. 7 In spite of some similarities apparently not identifiable with $\Sigma\mu$. \bar{a} 1, 1-4

Fr. 11 5 το]ι cι, τα] ι cι

2290. SAPPHO, BOOK iv?

It will generally be thought reasonable to assume on grounds of dialect, metre, and, as far as they go, contents, that the following fragment is to be attributed to Sappho and, if 1787 contained the fourth book, to the fourth book of her collected poems. No more can be made out than that some female person, presumably the poetess herself, is addressing someone to whom she appears to claim to have been a staunch friend.

The piece is written in an angular script of a common type ordinarily assigned to the late second or early third century, with lection signs which seem to be partly original, partly due to a second hand.

2291. SAPPHO?

Aeolic verses in stanzas of three lines are naturally attributed to Sappho, since we know of no poems of Alcaeus so composed, but too little is legible of what was contained in the papyrus here published for the hypothesis to be either confirmed or disproved.

There are prima facie parts of three pieces. In col. i paragraphi under ll. 3 and 5 indicate a two-lined, under ll. 21 and 24 a three-lined stanza, so that, if we assume that there were not more than two pieces in this column and that there are no errors, such as wrong location of a paragraphus (or paragraphi) or omission of a line (or lines), a piece must have ended either at l. 9 or at l. 15 or at l. 21 and the next begun accordingly either at l. 10 or l. 16 or l. 22. I do not discuss these alternatives here, since, as will be seen when I come to speak of the metre, other considerations exclude all but the first of them. There are certainly errors in col. ii. Under l. 2 is a paragraphus (accompanied by a coronis which the copyist notes was not in his exemplar) only two instead of three lines away from the last preceding. Under 1. 5 is a cancelled paragraphus. Under l. 6 is a paragraphus four lines away from the last preceding but six from the next following,2 after which paragraphi occur regularly under each third line. If we suppose that the paragraphus under l. 2 should be under l. 3, the position of all the paragraphi from col. i 21 onwards would be harmonized and the correction of that under col. ii 5 explained, but a new poem (if we accept the coronis added by the copyist de suo) would be made to start with καιφαι.[, which is not inconceivable but not specially attractive.

¹ Because the sixteen lines between the second paragraphus of the first pair and the first paragraphus of the second pair can be distributed into two-lined and three-lined stanzas in only three ways, namely, 2 two-lined and 4 three-lined or 5 two-lined and 2 three-lined or 8 two-lined.

² There is no reason to doubt that there was a paragraphus under l. 9, but it happens that the papyrus is broken away.

Of the metres exemplified in col. i it is not easy to give a satisfactory account, the only unequivocal verse being the Telesilleion in I. 4, and it is not necessary to repeat here the speculations to be found in the commentary. But ten lines, namely 1, 3, 5, 7, 9, 11, 14, 17, 20, 23, are distinctly longer than the rest and are separated in the upper part of the column by one, in the lower part by two shorter lines. It is obvious that, if a poem in two-lined stanzas consisting alternately of a short and a long line is followed by a poem in three-lined stanzas consisting of a short, a long, and a short line, the order shown by Il. 22–24, the last occurrence of a single short line will mark the beginning of the second poem. This would make I. 10 its first line, which squares with the evidence of the paragraphi (above), but is otherwise an unwelcome conclusion, since I. 10, as at present read, appears to have the scansion not of the first but of the third verse of the three-lined stanza. This may be the fact, but to accept it would necessitate the assumption of error in the manuscript and in the prevailing uncertainty I see no point in discussing the possibility here.¹

The text is written on the back of a second century account in a coarse hand of the common angular type in use from the late second to the early fourth century. This example may be assigned to the third. The lection signs and interlinear additions are, so far as I can tell, by the original hand.

¹ Though a speculation about the possibility of evading this and other difficulties at the cost of assuming the omission of one verse will be found in the note on Col. i 10.

Col. i There are traces of ink in the margin above v. I to the left

I.], a small curved stroke level with the tops of the letters, possibly the extreme right-hand side of the loop of ρ After γa an upright with a cross-stroke to right of its top]. a, ρa or ϕa [.], traces consistent with the upper and lower parts of δ ...[, possibly ιc , but ι almost completely rubbed away and of c only the bottom left-hand corner δ The first letter was circular; of the second only a trace level with the tops of the others; the third had a tail descending below the line and a long not quite horizontal cross-bar, level with the tops of the letters, extending to the right, neither γ nor τ satisfactory, ψ ? Between ι and ι what looks like λ , but not the λ of this hand, perhaps ι was a badly executed ν ϵ .[.], or ϵ ..; the only indication about which I am moderately sure is a stroke descending from the level of the tops of the letters left to right, e.g. ϵa , $\epsilon \delta$, $\epsilon \lambda$, but the fibres are in disorder, and even this may be illusory After $\rho \iota c$ a stroke rising to the right from the line with the beginning of a cross-stroke starting to the right from its top, followed after a blank by a cross-stroke which might

be a continuation, next a thick upright, its top slightly above the general level, its foot curving out to the left, beyond this obscure traces on the line of which the last might be the foot of an upright $4 \in \text{represented}$ only by a short upright stroke on the line 5. The left-hand side of 0, the left-hand stroke of 0, the top of 0 are missing Since a vowel must follow 0, perhaps 0 perhaps a 0 very clumsy and odd-looking 0 Perhaps simply $0 \text{ ov} \tau$, but the first 0 then rather broad and a trace on its left not accounted for; 0 overhaps would more naturally suggest itself as a reading 0 overhaps the overhang of 0 overhaps the middle of a stroke descending from left to right 0 overhaps on the line, e.g. 0 overhaps the right-hand part of the cross-stroke of 0 overhaps or the like 0 overhaps wo perhaps 0 overhaps the left-hand half of the cross-bar of 0 overhaps is very faint, but 0 overhaps wo probable Before 0 overhaps the lower part of an upright descending below the line 0 overhaps wo probable Before 0 overhaps the lower part of an upright descending below the middle 0 overhaps wo probable 0 overhaps about the middle 0 overhaps wo probable 0 overhaps the end of a cross-stroke touching 0 overhaps about the middle 0 overhaps wo probable 0 overhaps and 0 overhaps wo probable 0 overhaps wo pr

Col. ii 1 .[, the end of an upright descending below the line 2 ..., traces compatible with $\omega\nu$ 4 .[, on the line the lower left-hand arc of a circle 5 .[, the left-hand side of μ or ν probable 7 .[, perhaps the apex of δ 8]., the tip of an upright above the general level 17 .[, the lower part of an upright descending below the line 18 .[, an upright with traces to the right, ρ not particularly suggested 21 .[, the left-hand side of ϵ or possibly θ 23 There is no trace of ink between κ and π .[, an upright with a thickened top, descending below the line 25 .[, a small curved stroke slightly below the line, perhaps the left-hand end of the loop of α

Col. i 1 Though the o is damaged, c appears impossible. Not therefore $\pi\epsilon\delta\dot{\alpha}\beta aic$ but possibly $\pi\epsilon\delta\dot{\alpha}$ $\beta a\hat{\imath}o[\nu]$, but π cannot be verified.

For a speculation about the scansion of the lines with uneven numbers see on l. 5.

2 The circumflex seems to show that the verse began with a monosyllable, since Lesbian accentuation as exhibited by the papyri has no perispome dissyllables (or polysyllables), and a monosyllable is required for correspondence with 1.4.

If Π_{ω} λυανακτίδαις, the form might be equally well nominative singular or accusative plural. The same name appears to recur at l. 23 and the feminine adjective Π_{ω} λυάνακτις in Σ_{μ} . inc. lib. 40 (where the reference is to one of Sappho's rivals, Andromeda or Gorgo).

3 The line seems to begin with $--\circ\circ$, see on l. 5.

4 Prima facie χόρδαιει διακρέκην. On δια for ζα before a consonant see Άμ. xxv. But the division

χόρδαις(') ίδια κρέκην is conceivable.

5 The reading of the beginning of this line is manifestly very improbable, but the scansion as far as the second ϵ corresponds to that of the beginning of l. 3. Between this ϵ and π there is a space sufficient for a narrow letter which suggests that an ϵ , ligatured to ϵ as in ll. 3 and 4, may have disappeared. If so, the scansion of the remainder of the verse may be supposed to be 0-0-0-1 as it pretty certainly is in l. 7. The whole line would then be Telesilleion+iambic $\mu \acute{\epsilon} \tau \rho o \nu$ and the stanza, as marked by the paragraphi under ll. 3 and 5, Telesilleion, Telesilleion+iambic $\mu \acute{\epsilon} \tau \rho o \nu$, would be comparable to the Glyconic, Glyconic+iambic $\mu \acute{\epsilon} \tau \rho o \nu$ used by Alcaeus ($\lambda \mu$, frr. 119 seqq.). It may be worth recalling, though I do not know that the fact has any particular significance, that in 2295 fr. I this is written in two lines, divided Glyconic+I syllable, Telesilleion+iambic $\mu \acute{\epsilon} \tau \rho o \nu$.

7 Perhaps $\epsilon \lambda \epsilon \lambda i \epsilon \delta[\epsilon] \tau a \iota$, but I cannot verify it.

προς ανέως would naturally come to mind, particularly in the vicinity of $\phi\iota\lambda o\phi[\rho\dot{o}]\nu\omega c$, but though there is some uncertainty about τ , I should say ϵ was not a possible alternative.

8 If two syllables are missing before oc, and the spacing shows there are not fewer, I cannot reconcile the resulting form of verse with the required Telesilleion. The difficulty is removed, if the verse is not a Telesilleion but, say, a Glyconic, which it theoretically might be, if the second piece begins here and not at l. 10. See the note there and at l. 22.

9 The present reading of the end of the verse, from ω onwards, obviously allows for too many letters

to make \circ - \circ - \circ -, the scansion required for correspondence with 1. 7. But I cannot accommodate

it any better to the second verse of the three-lined stanza.

To It is plain that this verse as read cannot be a Telesilleion but that it can easily be made to correspond with 1. 24 on the assumption that both are iambic dimeters. A Telesilleion might be obtained by supposing that κa should be read $\kappa \lambda$, but though a is damaged no alternative appears possible and in any case $]\epsilon \kappa \lambda \iota \delta [...]$ seems an improbable sequence of letters. If it is an iambic dimeter, and therefore the third line of the first stanza of the second piece, 1. 8 need no longer be a Telesilleion but will correspond to 1. 22, whatever that is. On the other hand, it will become necessary to suppose that the first line of the next stanza has been omitted, though nothing is preserved to show that the copyist (or a corrector) indicated this.

II There appears to be room for a narrow letter between ι and β but nothing can have stood there consistently with the metre. I cannot explain the peculiar sequence of letters after β . The word does

not appear to be the same as that at the end of l. 17.

I have suggested in connexion with 1.8 that the first line of the three-lined stanza might be a Glyconic, but it is not easy, if the estimate of letters lost between ϵ and κ is correct, though not impossible, to make a Glyconic of 1. 22. It can only be done by postulating a double consonant followed by two separate vowels as the three missing letters. There is no great difficulty in devising such combinations, for example, $\delta \epsilon [\xi \iota a]$, but I can think of none that throws any light on the context. Another resource, which I cannot exclude, is the postulation of four missing letters, two of them narrow or written close together. It is not possible to scan the line as a Telesilleion nor, since the letter which seems to stand between the presumed ι and θ is no vowel, as a Glyconic of the form

24 Presumably τον μάργον ὄνδειξαι θέλω, an iambic dimeter.

Col. ii 2 Marginal notes as a rule refer to the column to their left. This refers to the coronis to its right. For $o\partial\kappa \eta\nu$ meaning 'was not in the exemplar' cf. $o\nu\kappa^{\eta} \epsilon\nu^{\tau} a\nu\tau\nu^{\gamma}$ written against a coronis in an unpublished papyrus of Simonides.

13 $\ddot{\iota}$ does not account for all the interlinear ink, but leaves a dot over the mark of length unexplained. It is not impossible to interpret $\dot{\epsilon}\kappa\pi\dot{a}\iota\dot{\epsilon}\prime-\ddot{\epsilon}\kappa$ $\pi\dot{a}\iota$ $\epsilon(\epsilon)$ or $\epsilon(o\iota)$ is a conceivable collocation—

but I cannot explain the addition.

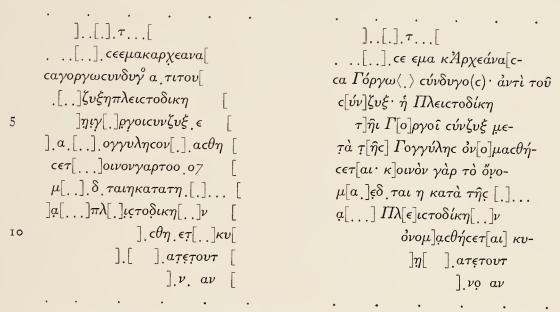

23 There is no trace of ink between κ and π and, though slightly more than the normal interval, hardly room even for o. It seems to follow that $\kappa \alpha \kappa$ must be interpreted as $\kappa \alpha \lambda$ $\hat{\epsilon} \kappa$

²³ It appears as if at least one syllable must have been formed by the letters lost between ϵ and ϵ and that the line cannot therefore have been the Alcaic hendecasyllable. Perhaps it is a Glyconic preceded by an iambic penthemimer.

2292. COMMENTARY ON SAPPHO.

This small scrap contains two names already known to us from Sappho's poems, Gongyla, a friend, and Gorgo, a rival, and two others, Archeanassa and Pleistodike, which are new. Though the single lemma cannot, as it stands, be an exact quotation, its last three words are compatible with the assumption that it comes from a Sapphic stanza, that is, from the first book of the collected works, but I find none among the surviving fragments to which the comment can apply and it is in itself a somewhat mysterious pronouncement, a characteristic of other such commentaries, even when they are more complete.

The hand is a neat specimen of the upright angular type, though the angularity is not very pronounced. It may be compared with **1606** and assigned to the second half of the second century.

2 . . . [, the lower part of an upright descending a little below the line followed by the bases of two letters which might be $a\chi$ 8 Possibly $\delta] \epsilon \delta \sigma \tau a \iota$, but σ not suggested by the trace on the line after δ] . . , the feet of two uprights followed by the lower part of an upright descending well below the line II] . , the upper part of an upright 12] . , a thin stroke curving up from left to touch the top of the left-hand angle of ν

2 seq. The natural interpretation of 4 seqq., 'Pleistodike shall be named mate to Gorgo along with Gongyla', is that they paraphrase the lemma, but in this there appears to be no mention of Pleistodike and the mate to Gorgo to be Archeanassa.

Άρχεάνας a: for this as a Mytilenean name cf. Strab. 599, Schol. Nicand. Th. 613, Aμ. 55 24 3 Either Γόργως, if εύζυγος is constructed with a genitive, or Γόργωι, if that is the Lesbian dative, must be written. ἔμα would seem to imply that a genitive was wanted, Γοργος that a dative stood in

cύνδυγο(c) ἀντὶ τοῦ cύνζυξ: this statement should be received with scepticism. δυγός is Boeotian, not, so far as is known, Lesbian, Aeolic. cύςδυ-γος, -ξ would be expected.

10 Perhaps some form of κύριος.

2293. Commentary on Sappho (Book iv?)

Not many words need be wasted on the wretched scraps which follow. That they come from a commentary on poems by Sappho is made clear by the occurrence of the names of Atthis and Gyrinno and a statement about Peitho's being the daughter of Aphrodite known to have been made by her ($\Sigma\mu$. inc. lib. 84); that it was a commentary on the fourth book (at least, if we are right in assuming that compositions in the metre of 1787 and 2290 made up the fourth book) is a reasonable conjecture founded on the lemmata in fr. 1 (a) $K\nu\theta\epsilon\rho\dot{\eta}\alpha\epsilon\tau\rho\dot{\phi}\phi\epsilon$ (col. ii 5), μ or $Z\epsilon\dot{\phi}\dot{\nu}\rho\omega$ $\pi\nu\epsilon\hat{\nu}\mu\alpha$ (col. iii 22), $\gamma\omega$ $\tau\dot{o}$ $\kappa\dot{\alpha}\lambda\lambda\delta\epsilon$ (col. iii 17), which suit a line of the form $\omega=0$ 0 0 0 0 0. The commentator seems to have had the unpleasant trick, found elsewhere, of sometimes or partially Atticizing his quotations, so that the gain even in the way of isolated words or phrases is less than it might have been, and the general character of commentaries such as this may be more advantageously examined in less disrupted examples, in this volume 2306 and 2307.

The hand, which varies in different fragments between light and heavy, may be compared with that of 2176 and assigned to the second century.

Fr. 1 (a) is contained in three detached pieces of papyrus. The approximate distance of the upper right-hand from the left-hand piece is determined by the supplement of col. ii 7. The lower right-hand piece is placed so that the ends of the lines are in a rough alinement with those of the upper.

Col. ii 5 The sense must be that in this place Sappho calls Peitho Κυθερήας τρόφος but in another passage her daughter, ἐν ἄλλοις δὲ θυγατέρα (τῆς) Ἀφροδίτης εἴρηκε τὴν Πειθώ (as in Schol. Hes. Op. 74). The commentator, therefore, took τρόφος as 'nurse' (or possibly 'mother'), but if there is anything in the equation of Hesychius, τροφοί· θρέμματα, there may have been no such contradiction as he makes out.

- Fr. 1 (b) The horizontal position of this scrap is fixed by the cross-fibres. Of the vertical position I am not sure.] $\chi\theta_0\nu\nu|\tau[.]c$ (e.g. $\mu_0\chi\theta_0\bar{\nu}\nu\tau\epsilon c$) and $\tau\alpha\nu\nu|\pi\tau\epsilon\rho\nu\nu\gamma$ - are indicated in ll. 23–4 and 24-2. In that case the trace in l. 22 will be ink that has soaked through the upper layer and may be the tail of the κ in fr. 1 (a) ii 22.
- Fr. 1 (a) Col. iii 12 seqq. I should suggest ἀγερώχους . . . ἄγαν ἐχούςας γέρας, one of the half-dozen etymologies offered by ancient authors (which the curious may find in Cramer A.O. i 29 and 44, Et. Mag. 7, 49, Et. Orion. 5, 16, Et. Gud., Apoll. Soph., Hesych., Eust. Od. xi 285, Tzetz. Chil. ix 118, and elsewhere) and close in the form of expression to Eust. Il. ii 654 οἱ ἄγαν γέρας ἔχοντες, Il. iii 36 ἀξιοῦντας

ἄγαν γέρας ἔχειν, though it does not present α -γ-ρ- χ in their proper order. Alcaeus is quoted (inc. lib. 80) for the sense ἄκοςμος καὶ ἀλαζών.

18 μέζον is what one would expect in Lesbian from meg-yon (cf. $\pi\lambda\dot{a}\zeta\omega$, $\pi\tau\dot{a}\zeta\omega$) and $\Sigma\mu$. \bar{a} 7, 6 should be corrected accordingly. But apparently μεcδ[again at **2301** fr. 3, 3.

19 ἀλλὰ μήποτε λέγει ὅτι 'but perhaps she means'; the apostrophe is mistaken.

23 ἀνεμοφόρητο[, cf. Σμ. ā 9 App. ἄνεμοι φέροιεν.

25 It is not to be believed that $\pi \acute{a}$ represents the scansion of the vocative of $\pi \acute{a}$ ic, see $\Sigma \mu$. xxxiii. To distinguish $\pi a\^{i}$ from $\pi \^{a}$, if that is what was aimed at, $\pi \check{a}$ or $\pi \^{a}$ might have been used.

26 I suggest: αὖτη (or ταῦτα) πρὸς Ανδρομέ]δην γέγρα[πται and in the next line ὑπὸ Ανδ[ρομέδης. For Andromeda see $\Sigma\mu$. inc. lib. 16 and 18.

Fr. 3 20 Probably κρές τον γάρ, which is perhaps to be recognized again at 2290, 26.

Fr. 10 (a) 14 I should divide and supplement : $\dot{\epsilon}\nu$ ταύτηι] τῆι ἀδῆι λέ[γει ὅτι

2294. Bibliographical details about a book of Sappho

The general character of the following fragment is hardly in doubt. A succession of verses in the Aeolic dialect, disconnected in sense and preceded and followed by prose, containing among other things a stichometrical statement, can be nothing but a register of first lines in a book of Sappho or Alcaeus and a note of the length of the book. The mention of 'Wedding Songs' further limits the possibility of authorship to Sappho. But on many points of detail our curiosity must remain unsatisfied. What was the number of the book in which these verses occurred? Is it really asserted that only the second to tenth were wedding songs and that these were appended to a piece of a different sort? What is the explanation of the fact that the metres of verses known from ancient quotations and reasonably assigned to the wedding songs (e.g. $\Sigma\mu$. $E\pi\iota\theta$. 7 (a) App.) or actually stated to be from them (e.g. ib. 10 App.) do not appear here? These questions might have been answered if this morsel had been only a little better preserved. I do not need to dwell on the services that might have been rendered by the whole of a work, of which this is presumably a part, containing similar information about all the books of Sappho.

The hand is a small neat uncial of the same type as **853**, **1231** though much more carefully formed. P. Flor. 112 may also be compared. I suppose it is to be dated in the second century, probably nearer the middle than the beginning.

I am by no means satisfied that the traces are rightly combined. Three letters may be represented 3]., perhaps two letters, of which the second would be ι , e.g. $] \circ \iota$, $] \circ \iota$ or $] \circ \iota$ 4]., on the line what suggests the extreme tip of the right-hand stroke of μ 5]., a dot level with the tops of the letters 7]., a trace compatible with the lower right-hand arc of o 8]., the traces suggest ν as the second letter but it was unusually broad if the preceding ink represents the tip of the right-hand branch of v II $\chi a \rho$ ρ is not at all satisfactory, being represented by an angle on the line, touching the tail of a, which suggests δ , but for δ there is nothing like enough room 12 [, the lower part of an upright 13].., perhaps three letters represented. Immediately before η I should suppose the apex of δ or λ ; this is preceded by the tips of three strokes, the first apparently descending left to right, the next two more or less upright 14. The position of the bar seems to point to $\bar{\iota}$ but the remains better suit $\bar{\eta}$, though this figure is anything but certain 16] ϕ not verifiable 18]., a thick upright stroke apparently turning to left at the foot 20 After π the top of a circle, e.g. o, then only the extreme tips of strokes]., apparently the right-hand end of a cross-stroke as of γ , τ .[, perhaps two letters represented, e.g. ε .[

³ The most likely interpretation that occurs to me is, 'ten poems ($\partial i \partial a'$) and of each the first verse ($c\tau i \chi o c$)', which, if it refers forward, would lead one to expect ten *initia*. There are in fact ten lines before the colophon-like l. 14, which are prima facie acceptable as *initia*, though the first is different from the other nine, a difference to the explanation of which there is perhaps a clue in ll. 15 seqq.

4 ἐννέπειν is a purely verse word and if the whole of this line is verse—and the context appears to exclude the possibility that it is a remark about 'the word $\epsilon \nu \nu \epsilon \pi \epsilon$ '—it must presumably be a portion of one of the dactylic measures. The remainder, whether one metre or more is represented, are certainly none of them dactylic, though one way of emending l. 12 would produce dactylic

5 seqq. It is known that some books of Sappho were not, as the first, second and third, for instance, were, metrically homogeneous. There is, therefore, no particular reason to expect that all the verses listed here will be in one and the same metre. Nor is there any certainty that they are. The parts of them that are preserved are not inconsistent with such a supposition, though two, ll. 10 and 12, are unmetrical as they stand and conformity will be the result of emendation and a third, l. 11, would perhaps naturally be taken to have had a different clausula from the others. But there are several metres which we should be apt to confuse when verses exemplifying them are defective at beginning and end.

5 ἀεί] caτε τὰν εὔποδα νύμφαν[is a natural guess, which, if it could be verified, would lead further tothe assumption that the metre to be recognized is the acatalectic Ionic tetrameter in which apparently

a whole book (partly preserved in 1787 and 2290) was composed.

τὰν . . . νύμφαν prima facie 'the bride' for whose wedding the poem was composed. But in view of the form of ll. 6 and 8 possibly a goddess is referred to. εὔποδα νύμφαν now also at 2308 2.

6 τα seems likely to be the end of a temporal adverb (-o]τα rather than $-\epsilon\iota$]τα). παίδα Κρονίδα suggests τὰν ἰόκολπον Άβαν. I call attention to the remarks I have made at Άμ. lxxxix.

7 Both the word $\delta \rho \gamma a \nu$ and the phrase $\delta \rho \gamma a \nu$ $\theta \epsilon \mu \dot{\epsilon} \nu a$ are ambiguous. Perhaps 'conceiving anger' is as likely an interpretation as any, though the exact opposite cannot be ruled out. $\tau \grave{a} \nu$ is presumably

8 This calls to mind the verse quoted from Sappho as a choriambic tetrameter, δεῦτέ νυν ἄβραι Χάριτες καλλίκομοί τε Μοῖςαι (Σμ. inc. lib. 13). But $\hat{\nu}$] $\hat{\nu}$ $\hat{\nu}$ is not certain here and $\delta \epsilon \nu \tau \epsilon \nu$] would project farther to the left than aei] in l. 5, though (since aei is quite uncertain) this is not a very important consideration.

9 ἄοιδαι or ἀοίδαι?

The metre shows that only one short syllable is missing between $\phi \rho \epsilon v$ and $]a\nu$, that is, a vowel and a consonant at most. The preceding and the following line contained three letters in the equiva-

10 Since three consecutive shorts cannot occur in the interior of an Aeolic verse the a before λιγύραν must be long. If the circumflex on at were correct, the end of this word must come at ot. A word-form consisting of a îou preceded by one, two, or three consonants is not theoretically impossible, but I very much suspect that what was intended is ato, though the further articulation of the letters before λιγύραν remains dubious.

11 Prima facie γάμβρον· ἄcaροι γὰρ ἐμάλικες, that is, an Asclepiad, for instance. But there are other possibilities.

12 - ϵ ί θ ϵ μ ϵ - is an impossible scansion, - ϵ $\bar{\alpha}$ ν θ ϵ μ ϵ - is contrary to Sappho's practice (so far as we know it, Σμ. lxxii). Something could be understood by -]cε φόβαις θεμένα λύραν, namely, 'she put down her lyre and (tend)ed her hair', one of the acatalectic dactylic metres (probably the longer, in which the whole of Bk. II was composed). But there are too many indeterminates for guessing to be profitable.

13 Ammonius π. διαφ. λεξ. 23 quotes a verse of Sappho which comes to us in the form ἀρτίως μὲν ά χρυτοπέδιλος ανως (Σμ. inc. lib. 8), but it does not appear possible to identify it with what is pre-

14 seqq. The first of these lines pretty certainly refers backwards. I should suppose, though this is less certain, that ll. 15-17 likewise refer backwards, and I can suggest an interpretation of them on that basis. To what ll. 18-20 refer I do not see any hope of determining.

14 Two possible theories about the statement made here occur to me. The first is that the damaged figure at the beginning is the number of the book, of the poems in which ll. 4-13 are a register of initia. Sappho is credited with nine books of lyrical poems and whatever doubt may be entertained about the number, it is a maximum ($\Sigma\mu$. xiii seq.) On this theory, then, we must read

Σαπφοῦς μ ελῶν] $\bar{\eta}$, 'Sappho Bk. 8', or something to the same effect, in spite of the slightly eccentric relation of the bar to the number noted in the apparatus criticus.

The second possibility, of the likelihood of which I cannot judge, is that the figure is simply a

repetition of the number of poems, e.g. ωιδαί] τ.

 $c\tau i\chi(o\iota)$ $\rho\lambda$. The only other book of which we know the length is the first, which contained 1,320 verses ($\Sigma\mu$. \bar{a} 16). 130–9 seems a remarkably small figure, but I know of no way of testing the assertion.

A register of prose initia with a stichometrical note attached to each may be seen in P. Flor. 371r. 15 seqq. φέρονται by itself means 'occur, are found in a text', but μετὰ τὴν πρώτην inclines me to conjecture that ἐπι]φέρονται should be supplemented and that what was said was to the effect that 'the poems which follow the first are entitled Wedding pieces', that is, that the second to the tenth of the *initia* listed above are the first verses of the group of compositions of which we find another mention in Schol. Verg. Georg. 1, 31 'Sappho . . . in libro qui inscribitur ἐπιθαλάμια '.

I cannot gauge what the probabilities are for and against a book's being made up of nine em- $\theta a \lambda \acute{a} \mu a$ appended to another piece ex hypothesi of a different sort. If it were so made up, it might naturally be said to have the title ' $E\pi \theta a \lambda \acute{a} \mu a$ ', though in fact only nine-tenths of it had that title. But it must be pointed out that there is a number of ancient quotations usually assigned, because of their contents or the connexion in which they are quoted—only one is actually described as $\tau \delta$ Σαπφικόν . . . ἐπιθαλάμιον τουτί (Σμ. Ἐπιθ. 10 App.)—to the book of ἐπιθαλάμια, which are in metres not found among those exemplified in ll. 5-13 of this manuscript.

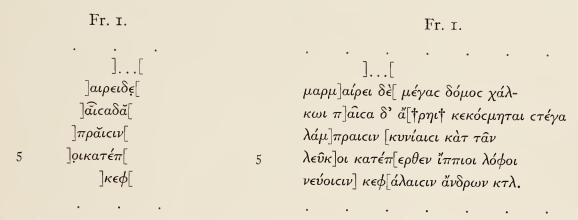

The correctness of the proposed interpretation of ll. 15-17 must, therefore, remain doubtful. 18 It is nearly certain that βυβλίου must be recognized, but I cannot explain what stands before

καὶ βέλτιον is commonly found in grammatical writings in commendation of readings, interpretations, and the like.

2295. ALCAEUS.

Like many other of the literary rolls from Oxyrrhynchus that of which the following fragments formed part seems to have been deliberately torn to shreds in antiquity. To judge by small differences discernible in the writing of different groups of the surviving scraps and by the impossibility of combining most of the pieces into larger wholes, we may be dealing with widely separated parts of the roll. At any rate, out of upwards of 800 verses not a single complete one, it would almost be true to say not a half of one, can be recovered, so that at present the only value of these remnants consists in such evidence as they provide about the dialect, which must be reserved for treatment elsewhere.

The manuscript has some claims to be considered a choice copy. The upper and lower margins are stained yellow for a certain distance (like those of 1806, for instance) and the ink is particularly black and opaque. The text is written in a practised and elegant uncial, to be compared with B.M. 732 (Kenyon, Palaeography pl. xix) and assigned to the first century, and is liberally provided with lection signs (including tremas, of which these are early specimens, in some cases placed not above but by the sides of the iotas to which they belong), due in part to the original scribe but more often to a contemporary corrector, who has also made some alterations, not always improvements, of reading and may be distinguished by the use of a heavier stroke and less opaque ink. A considerable number of marginal and interlinear comments have been added by other hands (how many other it is hard to say, perhaps as many as half a dozen, though it is impossible to be sure that the original scribe and the corrector do not figure among them), but their use is not great, partly because they are hard to decipher or illegible, partly because the text to which they refer is lost.

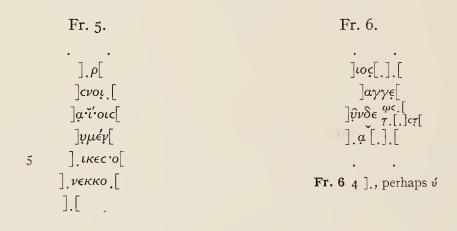

Fr. 1 I The lower part of a hooked upright, followed by the base of a curved letter slightly above the line, e.g.] $7 \in [,] v \in [$ 2 seqq. 2μ . 119

The second and third have circular tops, δ rather than ϵ followed by δ , θ , or the like. Above Above interlinear writing by a different hand, most resembling $]\chi$ but perhaps two letters

been written on ψ , one on either side of the central

followed by a dot on the line, perhaps two

2 [, the lower part of an upright

Fr. 60 I The hooked foot of an upright 2 A stroke descending to the line from the left, perhaps] k

Fr. 1 5 κατέπ[ερθεν represents καθύπερθεν (which has been substituted for it in the quotation) as ἔπερθα, 2297 fr. 5, 8 5, ὕπερθε. It is not surprising that the correction was never made, for the explanation of the form is still to seek.

Fr. 3 13 τ] $\psi \cdot \iota \cdot \delta \epsilon$ probable, as at $\Sigma \mu$. \bar{a} 3, 2; \bar{a} 6, 7.

Fr. 4 Col. ii As far as they go the lines may be alternately $-\times-\cup\cup[$ and $\times-\cup\cup[$ and the metre

5 πώγων in the next verse suggests the possibility of ἄξυρος here, though the word is not attested

except in Hesychius and in the sense of 'blunt'.

9 καππεπάδμ[ενος, for example, which I suppose to come from the Lesbian equivalent of καταπάςςω. This word together with θ έρμαν ϵ πόδ[ον puts one in mind of the punishment described in Schol. Ar. Plut. 168, Schol. Ar. Nub. 1079, Suid. in papavic.

11 - aic participle, the 2nd pers. sing. being presumably - aic.

- 12 μάτλητ[, in $\Sigma \mu$. \bar{a} 11 App. part of a shoe, but here perhaps no more than a thong.
- Fr. 9 Apparently a complaint about Alcaeus' changed fortunes and loneliness. Cf. 2165 fr. 1 ii. I suppose two syllables to be missing at the beginning of ll. 2, 8, one in the others, but it is not easy to find supplements of the right length relatively to each other. See on l. 8.

4 If the horizontal stroke below δ is a paragraphus, it has strayed far from its usual position.

- 6 The mark of length over the letter following κ [is not consistent with the supposition, which every other consideration supports, that these are Sapphic stanzas.
- 8 If $\hat{a}\theta a]\nu \hat{a}\tau o\iota c\iota$ is assumed, $oi[\zeta \nu\rho\sigma\nu, oi]\sigma$, and $\nu\hat{v}\nu$ would be about the right corresponding length in ll. 7, 6, 3 but even $\kappa a \tau \epsilon [c\delta\sigma\mu]$ would be short in l. 4.
 - Fr. 10 looks as if it might stand above fr. 11 at no great interval.

Fr. 11 contains prima facie Sapphic stanzas.

- 6 If the mark of length (which is not original) is correct, φοίταν is infinitive, but I suspect it is wrong and that φοίταντες is meant.
- Fr. 13 4 κ]ύδνας Μυτ[ιλήνας. κυδνός has a rather fleeting existence as a variant of κυδρός in Hesiod Θεογ. 328, Έργ. 257, Alcman ap. Schol. Pind. Pyth. iv 319, the writer π ερὶ ταρίχων ap. Athen. iii 116 c(?). Liddell and Scott cite it from I.G. xiv 2117, apparently mistakenly. But it seems the most probable reading here.
 - Fr. 18 Col. i 2 It is hard to see how $]\tau a\tau \eta c$ can have been part of the text except as $]\tau a\tau'$ $\hat{\eta}c$.
 - 3 Perhaps φ]όνον on the strength of the note, which I cannot in other respects understand at all.

4 Presumably ἀντετάξατο with nothing lost.

- 5 The note (apparently a paraphrase of the text) is complete and should be able to be interpreted, but apart from the detail I cannot make out the general grammatical form. οὖκ ἄν... should be preceded by εἰ and ἀλλὰ ἐπλήγη(ε) by some other agrist. ἦι ἄν ἄγηιε should be followed by a future.
- Fr. 28 The long verses might, as far as they go, be Asclepiads, except v. 17 in which $\epsilon \pi i \phi \rho \nu \nu \omega$ occupies the place of $\circ \circ -$. Since the even lines are consistently shorter than the odd, it must be assumed either that two (or a multiple of two) verses have been lost after 17, for in 19–20 long and short have changed places, or that different pieces are represented.
- 3 κκύρον appears to recur at fr. 35, 2 and, I should be inclined to suppose, in Aμ. 36, 13 (P. Berl. 9810, where indeed it does not seem possible to read an v). At the meaning and the reason for the doubt about the length of the v we can only guess. I offer the guess that it is the vocative of a noun like γάκτρων, φύκων, a term of abuse (perhaps playful)—though I find nothing from which such a noun could be derived except κκύρον, a plant that sends cattle mad—and that there was some confusion with κκύρος 'marble chippings'. In that case perhaps -τερα c'. If the marginal note implies that Apion took μένναντας κκύρον together, 'waiting for κκύρον', the interpretation as a vocative falls to the ground. But it need only mean that 'Apion holds that the a in μένναντας and the v in κκύρον are both short', not much of a contribution to knowledge, but as much as need be expected from this quarter.

Apion, who is mentioned again on l. 17 and in frr. 54, 55 (and perhaps at fr. 4 col. i bottom and fr. 40 col. ii bottom), was not known to have occupied himself with Alcaeus. The sign like a large apostrophe (or antisigma) in this place and again at v. 17 appears to be a *renvoi*, the similar sign at v. 5 a divider

v. 5 a divider.

- 17 Φρύνων the Athenian general killed by Pittacus in the struggle for Sigeum, Strabo 599 seq., Suid. in Πίττακος (Olympiad 42), Jerome's Eusebius (Olympiad 43). The line is metrically anomalous, the others ending like Asclepiads, whereas this is longer by a diiamb. The fact that Apion could read $\epsilon \tau \iota \Phi \rho \nu (\nu \omega \nu a)$ suggests that] $a \tau \dot{\epsilon} \rho \omega \nu \, \dot{\epsilon} \pi \iota$ is the proper interpretation of the $\pi a \rho \dot{a} \delta o c \iota c$.
- 18 Schol. 'These are lost, there is a gap'. What then is the line, of which the end, written in the same hand as the annotation and then struck out, is preserved?

19 Not av. 'Let us' (or 'we shall') 'draw our . . ships into the sea'.

¹ Though, as Professor Page reminds me, οἱ περὶ Ἀπίωνα are adduced for a misinterpretation of μέδειc in Aμ. 73 (b).

- **Fr. 29** The appearance of the recto is consistent with a position at the top of the same column as fr. 28.
- Fr. 30 The appearance is consistent with a position to the left of fr. 28. Further, I should judge that there is a fair chance that fr. 37, 1–3 contains left-hand portions of the same lines as fr. 30, 6–8.

4 Whether $d\mu \dot{v}$ precedes $\delta \rho \omega v$, fr. 32, 2, cannot be verified. See on frr. 32–3.

If a guess had to be made, 'perishing memorials of . . . of old time, Aeolids from' (or 'scions of') might do as well as another.

Fr. 31 The appearance is consistent with a position in the neighbourhood of fr. 30.

Col. ii 5-6 E.g. á]|cnic.

- Frr. 32–3 It seems possible, though not certain, that these two fragments join. Vv. 4–5 would then read: $\pi a \gamma \cdot [\cdot] a \iota o \cdot |\delta \rho \omega \nu a \nu \delta \rho[\cdot]$. The suggested combination of fr. 30, 4 $\mathring{a}\mu \mathring{v}$ with fr. 32, 2 $\delta \rho \omega \nu$ would necessarily lead further to: $\pi a \gamma \cdot [\cdot] a \iota o \cdot \epsilon \omega [\cdot] \check{a}\mu \mathring{v} |\delta \rho \omega \nu a \nu \delta \rho \omega \nu \pi \check{a} \lambda \acute{a}\omega \nu \delta[$, but though there arises no incongruity in the letters, the appearance of the papyrus seems to me very much against this possibility.
- Frr. 34–6 resemble each other and frr. 32–3 sufficiently to make it reasonable to suppose that they came from the same neighbourhood. Although I cannot verify the conjecture, I do not think the combination of fr. 34, I with fr. 30, 8, to give $M\nu\pi[\lambda]\eta\nu[$, by any means impossible. On the location of fr. 37 see note on fr. 30.

Fr. 40 Col. i]το(υ) τυ |ρα]ννις

2 The first example in a book text of the treatment of vowel+ $_F$ +consonant not c.

7 I presume $\tilde{\epsilon}\nu\theta$. Perhaps the boar was on the shield ($\dot{\omega}c\ \dot{\epsilon}\pi\dot{l}\ \tau\hat{\eta}c\ \dot{a}[c\pi\dot{l}\delta\sigma c?)$). See Chase, Harvard Studies xiii (1902) 98 for a list of representations of such.

κάπριος is not the form we should expect this word to have in Lesbian.

12 I suppose from (ἀ) cτράπτω. Cf. cτροπά (Paphian), Στορπαος (Zeus at Tegea, IG. v(2) 64).

Fr. 41 3 ωρεος abnormal 5 φλ]οίςβω

Fr. 54 This fragment is very doubtfully assigned. It may well be from a different manuscript.

Fr. 55 The same remark applies.

2296. ALCAEUS.

The authorship of the following fragments is established by coincidences with 2295, which itself contains quotations to which the name of Alcaeus is attached. By means of fr. 1 of this manuscript three fragments of that can be brought into a close relation, though even now I cannot join them to one another with certainty, but only point to the possibility that the distribution of the letters in the line was nearly the same in both manuscripts. The spacing of the lines is exactly the same in both.

The hand (which seems to be responsible for the single accent) is of the common angular type, comparable with 1610, though slightly less upright, and assignable to the second or third century.

Fr. 1 with 2295.

Fr. 1 4] is close to the break and might be part of another letter, e.g. η , not, I think, ν 5]., a dot level with the tops of the letters 9]., a horizontal stroke, level with the tops of the letters, which might represent γ or τ , not, I think, π . The corresponding letter in 2295 fr. 46 may well be a τ with a circular instead of an upright shank upright

Fr. 2.		Fr. 3.
	,]με.[]γε.[
]/۴[

Fr. 2 1]., traces of an upright 2 .[, an angle off the line; perhaps 0 intended 3].., an upright with traces to its left; perhaps]ai,] δi , or] λi , or a single] ν 4 Traces of three uprights

Fr. 3 Beginning of a stanza and beginnings of verses

1 .[, an upright with a thickened top; perhaps μ or ν 2 .[, a trace suggesting the top left-hand arc of a circle

Fr. 4 contains parts of $A\mu$. **119**, 3 seqq. and overlaps **2295** fr. 1, 4 seqq., of which the stichometry is repeated.

6 The slanting stroke below c looks like an acute accent but is too far above the line; it may be

meant for a mark of separation, for which it is also misplaced, but less so.

Fr. 1 I take these verses to be the remains of Sapphic stanzas, ll. 2, 6, and 10 being the short lines. If this is correct, only one syllable is wanting at the beginning of ll. 1, 9, and 10 in the right-hand transcript.

2 ματήτην: cf. **2166** (ε) **31**, 3; $\Sigma \mu$. inc. auct. 12, 3; Theoc. 29, 15.

4 I can see no reference in the interlinear note of **2295** fr. 45 to what survives here. The accent there may be taken to indicate the article τalc .

7 δικανον[: καν appears to be fixed (if these are Sapphic stanzas) as the fifth syllable and therefore as long. ἴκάνον is consequently ruled out. I suggest καδ δίκαν. On the length of the α of ἰκάνω see Αμ. xiii note.

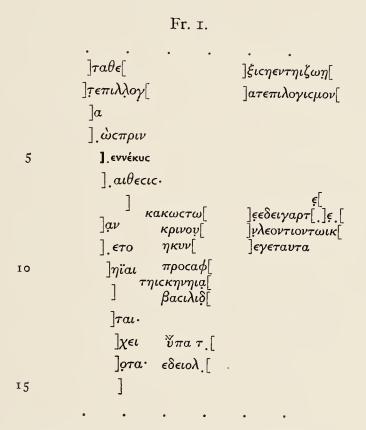

9]. $\pi \epsilon i_{J} c \epsilon_{L} c \theta_{J} a \iota$ appears to me compatible with the data.

10 $Z\epsilon\hat{v}$]c ἔχει τέλος $K\rho$ ο[νίδαις . . . αὖτος is a supplement brought to mind by Semonides 1, 1 seq. and Archilochus(?) ap. Aristid. 45, 39. If this is near the truth, the word ending in $-\mu\mu\alpha\tau$ ος should be recoverable, the sense being πάντος χρήματος or πράχματος. I do not know what the chances are that χρημα itself could be spelt with two μ s. If it could, ἐκάςτω χρήμματος would serve.

Fr. 4 $\tilde{\epsilon}\rho\kappa[oc:$ The quotation has $\tilde{a}\rho\kappa oc$ (otherwise specifically attested for Alcaeus, $A\mu$. **159**) but $\tilde{\epsilon}\rho\kappa oc$ βέλεων is Homeric.

2297. ALCAEUS.

One hand appears to be responsible for the bulk of the text, notes, and lection signs of the following fragments of Alcaeus, though there are a few additions by another or others. I should say that it is the same, though in the text somewhat larger in the notes somewhat smaller, as that of 1092, and indeed this may be the manuscript referred to in the introduction to that number. It may be compared with P. Rendel Harris 28 and the Euphorion published in Ann. Scuol. Norm. Sup. Pisa iv (1935) (for my knowledge of the appearance of which I am indebted to Professor P. Maas), and placed in the latter part of the second century.

Fr. 1 4]., an upright, ι or ν 5]., a loop above a hook, perhaps β 6] τ or γ 9]., the top of an upright, ι or ν

¹ There is a number of manuscripts in similar hands of which I have identified a Herodotus, Bk. III, and a Plato (*Phaedo*, overlapping in places 229).

	Fr. 3.	Fr. 3.	В
5			•
]ξηδεθᾶςκεζευ [].οιρα τάρβηνδό[]ξηι δὲ θᾶς κε Ζεῦς]μοῖρα. τάρβην δ' δ	_

Fr. 3 1 Of v[only the tip of the tail, but the distance from θ is against ρ 2 Of τ only the tip of the tail [, a dot on the line compatible with a, λ , ϵ 3 $\mu[$ or v[7 The accent on $\tau a \rho$ appears to have been washed out, that on o is represented by a mere dot and a circumflex is equally possible

Fr. 4 I Though ι is close to the edge, η cannot be read 2] α probable The traces of the last letter are off the line, which suggests ϱ . Perhaps $\varrho \varrho$ 4 The tail of a letter below the line followed by a horizontal stroke on the line and this by the right-hand stroke of α or λ , e.g. $\varrho \xi \alpha$ or $\varrho \xi \alpha$ 6]., an upright, η , μ , among the possibilities 7 The two letters after $\varrho \varrho$ (for which I cannot quite rule out $\varrho \varrho$) are rubbed and could not be verified, next a short upright with a hook to the right at the bottom, not $\varrho \varrho$ perhaps $\varrho \varrho$, followed by the lower part of a similar stroke, perhaps $\varrho \varrho \varrho$ or $\varrho \varrho$ The interlinear ink looks like the top half of $\varrho \varrho$, but I am not sure that it all comes from one pen $\varrho \varrho$ Apparently the last line of the column

Fr. 5 (a)-(d) The horizontal relations to (a) of (c) and (d) appear to be established by the fibres of the back. I see nothing to show their distances from it, but it seems to me at least possible that (c) represents the extreme lower end of the right-hand upright of the first ν in (a) 8 and the tail of the letter next following. The first letter of (d) 2 will have stood below the η of (a) 8, but as I trace none of the cross-fibres of (c) in (d), (d) may (and, if I am right about the proximity to (a) of (c), must)

have been separated from (a) by at least as much as the height of (c). (b) is at first sight very dissimilar to the others, being stained and frayed, and I might not have been able to locate it with certainty by the evidence of the cross-fibres, but the suitability of the sense produced in 1. 7 by its combination with (a) seems to me to decide its vertical relation to (a), from which in that line it will be separated only by one vowel.

- Fr. 5 (a) and (b) 2 marg. Or] oy There may be ink above ν , indicating the presence of abbreviation 4. [, a trace of ink in the left-hand margin followed by the lower part of an upright descending below the line 6 $\epsilon\mu$ corrected to $\epsilon\nu$, apparently by the original hand 7], a trace level with the top of a, suggesting the tip of an upright 8], ν suggested
- (c) I A trace on the line followed by the lower part of an upright descending below the line 2 .[, the foot of an upright 3 χ [damaged, perhaps π possible
- (d) I A trace below the line, perhaps not ink, followed at an interval by the foot of an upright 2]..., a dot on the line followed by the lower part of an upright descending below the line 3 A trace level with the tops of the letters followed by what suggests the apex of a, δ , λ , or the left-hand apex of μ or ν

(On the location of frr. 5 and 9 see now p. 59)

Fr. 41 The writing is slightly larger than that of the other notes and I am doubtful whether the fr. is rightly assigned to this manuscript

Fr. 42 Perhaps not the same hand as that of the other notes

Fr. 1 Perhaps Alcaic stanzas.

This commentator's use of ζωή for what is more often called cυνήθεια, 'contemporary usage', has escaped Liddell and Scott. βίος is similarly used, e.g. Ap. Dysc. R. Έκιρρ. 130, 6 Schn.

5 has been added in a hand which does not appear to recur.

6 θέτις is quoted from Alcaeus as equivalent to ποίητις, presumably meaning 'doing' or 'making' (not 'poetry'), $A\mu$. 174.

10 The schol. suggests the possibility of the supplement $\beta \alpha \epsilon i \lambda] \eta i \alpha i$.

Fr. 2 ii 3 The accent shows that $\pi \acute{\epsilon} \lambda \tau$ is complete at the beginning. I do not recognize it and hesitate to compare the Cyrenaic $\tau \acute{\epsilon} \nu \tau a\iota$ (for $\tau \acute{\epsilon} \lambda \acute{\epsilon} \tau a\iota$) meaning $\acute{\epsilon} c\tau a\iota$ (Glossa xviii 212).

4 Part of καταςβέννυμι.

Fr. 3 5 $(\pi)\epsilon\phi\alpha\nu\nu\epsilon$ $\tau\epsilon$ $\kappa[\alpha]$ is the natural presumption.

6 $\theta \hat{a}c$, meaning $\tilde{\epsilon}\omega c$ not $\tau \hat{\epsilon}\omega c$, is guaranteed by the metre here but apparently $\tilde{a}c$ at $\Sigma \mu$. \tilde{a} 11, 11. $\theta \hat{a}c$ is the reading of the papyrus at $\mathcal{A}\mu$. 48, 8 but $\tilde{a}c$ at $\mathcal{A}\mu$. 62, 20, neither metrically guaranteed. $\tilde{a}c$ is also found in the quotation $\Sigma \mu$. $\tilde{\beta}$ 1 App. and ? 2289 fr. 4, 6.

Frr. 4-10 appear to come from the same region.

Fr. 4 Ι ἐθήκαο seems ruled out; perhaps ἠνίκαο.

- 2 ἐκέρεαο is not a form of commentator's Greek and presumably is taken from the text. I must suppose it is second person singular acrist middle of κέρναμι, although this verb is otherwise attested only in forms from the present stem. The sense will be 'mixed the cup of battle' (cf. 2306 i), for κέρναμι (κεράννυμι) does not appear to be used as a synonym of μείγνυμι in the phrases meaning 'joining battle'. (μείξαντες . . Άρενα, or something of the sort is thought to be attributable to Alcaeus, Άμ. 91.) It may be supererogatory to add that κείρεςθαι would give ἐκέρραο and, moreover, is not constructed like κόπτεςθαι.
 - 3 The schol. implies $\pi i\theta \omega \dots i\delta \epsilon \epsilon \int \pi \delta \tau \omega$, 'of an ownerless wine barrel', in the text.

Fr. 5 2306 ii seems to show that this is the continuation of $A\mu$. 87.

- 5 πόδες 'feet' or 'sheets'? As a pure guess I should prefer the first, 'my feet entangled in the ropes'.
- 6 βίμβλιδες: cf. Et. Mag. 197, 30 βιβλίδες . . . cχοινία τὰ ἐκ βίβλου πεπλεγμένα, the ὅπλον . . . βύβλινον of Homer Od. xxi 391.

7 ἄχματα: called φόρτια by Alcaeus at $A\mu$. 51, 1 and Sappho at $\Sigma\mu$. \bar{a} 9, 13.

I suppose 'were flung abroad' or something of the sort, but -παλαχ- cannot be read and I doubt

whether παλάςςω would be the proper word.

- 8 ἔπερθα: cf. κατέπερθεν **2295** fr. 1, 5 =**2296** fr. 4, 2. Before it possibly $[\phi \delta] \rho \eta \nu \tau(\alpha \iota)$. If fr. 5 (c) is to be attached immediately below this line, $\mu \epsilon \nu \phi[o] \rho$ is an acceptable interpretation of the indications.
 - (ε) 5 interl. Perhaps τ]οῖε $\pi\epsilon$ ρὶ[Ἀλκαῖον, Φίττακον or the like.

Fr. 6 Prima facie the Alcaic stanza.

2 seq. ἀλλ' ἄγι . . . αἴ ποτα κἄλλοτα; cf. Άμ. 22, 10 seq.

5 Not κρέτηται, presumably]γρέτηται. The line seems to have been cancelled by being enclosed in a pair of brackets, of which that at the end survives.

Fr. 10 Cp. 2295 fr. 29?

- Fr. 14 4 I cannot say that $\mu \hat{o} = \rho a \nu$ is an impossible reading.
- Fr. 23 I For instance, Mυ]ριννα[
- Fr. 25 1 Μυτω[suggests nothing but the eponym of Mytilene or a word derived from his name, see Steph. Byz. in Μυτιλήνη.

2 νεάνιδες (-ac), νεάνιαι are possibilities.

Fr. 28 2 άλ]λαι ci glossed ματαίαι ci is indicated. This ἀλλος—whether ἄλλος in a specialized sense or a different word, ἄλλος, as a fresh piece of evidence to be found in the Addenda to this volume, p. 146 (1789. 10) seems to assert (? cf. Hdn. π .μ.λ. 932, 29 L.), may be recognized in ἄλλως (= μάτην), άλλοφρονεῖν, and perhaps elsewhere (see L.–S. in ἢλεός). At Hes. Theog. 872 I suggest that the true reading is neither αἱ δ᾽ ἄλλαι codd., Hesych. in μαψαῦραι, nor οἱ δ᾽ ἄλλοι Schoemann, but οἱ δ᾽ ἀλλαι (however to be accented).

Fr. 40 2 $M\dot{v}$]ρειλον. 4 $\tau o\hat{v}$]τ' (ἐετιν).

Fr. 41 I am inclined to think that this scrap is more likely to belong to 1092 than to this manuscript.

Fr. 42 If this note belongs to this manuscript, it might refer to the line πèρ μèν γὰρ ἄντλος (which would have occurred not very far away from fr. 5) and have had some such form as τὸ cημεῖον ὅτι τὴν ἀντλον εἴρηκε. But I am not sure that it does and a note of this form might equally well occur in the margin of an Odyssey at xii 411.

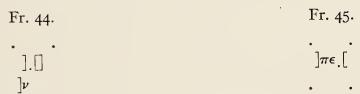

Addenda to 2297.

After long consideration I believe I can say with assurance that fr. 9 (a) is to be located below fr. 5 (a) in such a position that $]\rho\eta\nu\tau$ and $]\cdot\alpha\lambda\lambda\alpha$ start from the same vertical line.

Since I can trace in 9 (a) none of the cross-fibres of 5(c), I presume that it must, like 5(d), have stood clear of it. But unlike 5(d), which may have stood either higher or lower than 5(c), 9(a) can only have stood lower.

The fixing of the horizontal situation of 9(a) has the result of ruling out the possibility of actually joining 9(b) to it. Although the fibres of the back of 5(a) are partly stripped off, it is reasonably certain that 9(b) stood clear of it.

The following scraps are to be added:

Fr. 45 [, a sinuous upright with traces to right; perhaps two letters

Fr. 44 r The lower tip of an upright descending below the line

	Fr. 47.	Fr. 48.
Fr. 46.		٠]ạڊ[
$]\delta oldsymbol{\check{a}}[$	$]\mu\epsilon\nu[$	$]\omega au\iota u$. [
$]\eta$.[] [].[

Fr. 46 I There is a stroke in the hand of the text rising to the right from the middle of the right-hand stroke of α ; perhaps an inserted letter, e.g. λ , not a deletion 2 [, perhaps the top left-hand corner of c or the like

Fr. 48 1 Of c only the base 2 .[, apparently the start of a stroke rising to right from below the line

2298. ALCAEUS.

The singing at Attic tables of verses of Alcaeus and Anacreon was known from Aristophanes' $\Delta a \iota \tau a \lambda \hat{\eta} c$ (223 K). It would not be expected that this mode of transmission should make for purity of text, and by the recovery in its original context of an Alcaic stanza cited among examples of $c \kappa \delta \lambda \iota a$ by Athenaeus we are now enabled to see something of the deformation which in fact took place.

The hand of this manuscript is a poorly executed specimen of the type represented by P. Iand. I (recto), P. Oslo 68, P. gr. Vind. 19996 a, P. Berl. 9775 (Schubart, Pap. graec. II b), P.S.I. 1092, P. gr. Vind. 19996 b, with large and plentiful serifs. Professor Schubart, for reasons given on pp. 112 seq. of his *Griechische Palaeographie*, assigns it to the first century B.C.; I should have been inclined to think it might fall (later than P. Berl. 9767, Schubart Pap. graec. II a, earlier than 1362, and their associates) within the next century. Most of the lection signs appear to be due to the writer of the text and all may be so, but one or two, e.g. the short over the second α in fr. 1, 3, the accent on ι in fr. 1, 6, the line and dot deleting ι in fr. 1, 7, are in a shinier ink.

Fr. 1.]..ονχ[]ροναι []. ον χ[ό]ρον αί []. $\nu \hat{a} \check{a} \phi$ [...] $\epsilon c \delta \nu \gamma o \nu$.[]. νᾶα φ[ερ]έςδυγον]ηνγαρο[]κάρηον[]ην γὰρ ο[ΰ]κ ἄρηον]ωκατεχηναήταις 5]ω κατέχην ἀήταις] $\gamma \hat{a} c \chi \rho \hat{\eta} \pi \rho o \hat{t} \delta \eta \nu \pi \lambda o \Gamma$ έ]κ γᾶς χρὴ προΐδην πλό[ον]ικαιπ[.]αμανε[]η $\dot{\iota}$.) δύνατα]ι καὶ π[αλ]άμαν ἔ[χ]ηι,]ον[...] νηται. έπεὶ δέ κ' έν π]όν[τωι γ]ένηται γκα• τωι παρέοντι 🤇) ἀνά γκα. 10 αχανα μαχάνα] μ oc $\phi\epsilon\rho$ [$\epsilon \nu$ $\epsilon \nu$

][·]λα.[
]ὲνέλ[]ķακο[
] $v\epsilon$.]ạɨặ[
ν [

Fr. 3 1 [, a horizontal serif on the line

Fr. 2 I Two curves on the line, $\lambda \epsilon$, $\epsilon \epsilon$ among the possibilities, followed by a downstroke curling to the left below the line 3]., a stroke descending to the line from left to right .[, o or ω 4 .[, the left-hand tip of a crossbar level with the top of ν

Fr. 1 3 φερέζυγον, 'benched', unattested in this sense. εὐcδύγων . . . νάων $A\mu$. 17, 9. 5 ἀήταις, no doubt feminine as at $\Sigma\mu$. \bar{a} 9, 9, Simon. 41, 1, and elsewhere.

6 seqq. This stanza is quoted by Athenaeus (xv 695a), among other scolia, in the following form: $\dot{\epsilon}\kappa$ γη̄ς χρη̄ κατίδην πλόον | $\dot{\epsilon}i$ τις δύναιτο καί παλάμην ἔχοι | $\dot{\epsilon}\pi\epsilon$ ί δὲ καὶ ἐν πόντωι γένηται | τῶι παρέοντι τρέχειν ἀνάγκη. Bergk shrewdly conjectured that Alcaeus might be the author, without making use of the argument afforded by the form κατίδην (preserved in A), and rightly suspected τρέχειν, though not because it will not allow παρέοντι to scan. On the strength of Plut. 798 D ἔξω βλέπονει ναντιῶντες καὶ ταραττόμενοι μένειν τε καὶ χρῆςθαι τοῖς παροῦςιν ἀνάγκην ἔχοντες he suggested χρέεςθ', which (though πλῶι χρῆςθαι is the phrase which might properly be expected) is open to the same objection, as well as others, and he did not observe that κατίδην, which means 'to catch sight of', did not give the required sense. Perhaps it is now possible to come nearer to what Alcaeus wrote with ⟨ἀλλὶ εὖ μὲν⟩ ἐκ γᾶς . . . αἴ κεν δύναται . . . τῶι παρέοντι μένην ἀνάγκα. I should guess that what was said in vv. 10–11 came to 'There is no way of altering the conditions (οὐδ' ἴα μ]αχάνα). You must go with the wind (ὤς κ' ἄν]εμος φέρ[ηι)'.

2299. SAPPHO or ALCAEUS.

well represent the adjective formed from $\mathcal{A}\tau\theta\iota\epsilon$, Sappho's friend. But until there is stronger evidence one way or the other, the question of attribution must be left in suspense.

The writing appears to me to belong to a type of which examples are assigned to the latter part of the first century before and the earlier part of the first century after Christ. During its currency I think there is recognizable a change in the method of cutting the reed-point, so that the strokes of which the letters are composed are no longer furry and uniform in thickness but sharp and variable in thickness. Accordingly I should place the present specimen towards the middle of the first century A.D.

Some of the lection signs and corrections seem to be original, others to have been added by at least one subsequent hand, and not less than two hands are responsible for the sparse marginalia.

Fr. 27 Perhaps from the same region as fr. 2 Between δ and the next letter interlinear traces

Fr. 24. $\mu \epsilon \nu$]να .[

Fr. 26 (a). Fr. 26 (b).]cακ[]acv..[

These two fragments possibly stand opposite each other at the level shown. They may well come from the same neighbourhood as frr. 1-2

Fr. 26 (a) 3 Interlinear ink between ac and over v [, the lower part of an upright and the lower left-hand arc of a circle, e.g. 10, but I cannot rule out a single k

Fr. 28.	Fr. 29.
.]½½[] <u>΄θυ</u> .[].cω[
Fr. 28 Or]μ Or μ[Fr. 29 1]., upper right-hand arc of a

circle, perhaps o; some ink not accounted for at the upper end of the accent [, a stroke rising from the line to the right, e.g. λ , μ 2]., the right-hand end of a curved stroke like the top of ϵ but well above the level of the letters

u[Fr. 31.
$m\dot{o}[$	·] ø [
the tail of an upright]rcý[

Fr. 30 1]., part of the tail of an upright descending below the line 2ω not ruled out

Fr. 4 3 seq. Perhaps ἐς κίβιςιν . . . ἐθήκατο.

5 Apparently έκ δ' έλε μ(οι) ὅςτια, cf. Άμ. 97 έκ δ' ἔλετο φρένας.

7 As far as I can tell δέρμα βόος would suit.

Fr. 5 (a) 2 νόημμ' ἀργαλε-.

3 $\theta[\epsilon \rho] \dot{\alpha} \pi o \nu [\tau \text{ and, if so, perhaps } -\alpha \dot{\tau} \alpha, c \dot{o} \nu \theta$.

Fr. 6 There appear to be errors here. The interlinear verse between 6-7 looks like an emended version of l. 2; if its first position is correct, there is only one line (instead of two or four) after the paragraphus below l. 5, if its second, there are only three lines between the paragraphi below ll. 1 and 5. Again, there are only three lines before the first paragraphus of the indented piece.

This criticism, of course, assumes that the indentation of l. 7 and the following marks the beginning of a new piece. There are actually the proper number of lines between the paragraphi below ll. 1 and 5 and below ll. 5 and 9 (the proper position of the interlinear line being taken to be l. 2), but I know of no parallel to the indentation of part of a stanza.

6 $\hat{\eta}\rho$ ' $\check{\epsilon}\tau\iota$...; cf. $A\mu$. 146, which might be in the same metre.

Fr. 7 I I suppose ἀρήων 'better'.

2 The accent on v may have been cancelled by the bracket at its upper end.

Fr. 8 Col. ii There seems to be synaphea between vv. 6-7 and 9-10, but both μ and ϵ are capable of explanation as representing monosyllables, so that Asclepiads are not certainly ruled out.

II ἀνάδεες: cf. 2291 ii 22. I should have recognized this (or the infinitive, ἀηδεῖν) at $\Sigma \mu$. \bar{a} 11, 5. The spelling follows ἀνάτα not θαάςςω.

13 $l]\pi\pi\sigma\iota\iota \tau \eta \chi\epsilon\iota$.

Fr. 10 (b) i What remains suits Ionic trimeters or tetrameters.

2 $A\phi\rho\delta]\delta\iota\tau[a \text{ corrected from } -\delta\epsilon\hat{\iota}\tau a \text{ suggests itself but the circumflex was not over } \epsilon\iota \text{ but over } \iota\tau.$ 5 $\mu a\lambda]o\pi a\rho a \nu\epsilon$.

7 Cf. Hesych. ζαέντες πνέοντες.

ταν ή ἀντίςτροφος, 'the corresponding stanza has caν', seems a senseless observation in reference to compositions like those of the Lesbian poets. I suspect that τὸ ἀντίγραφον is meant, 'the exemplar has

cav'. I do not know whether to go further and suppose that by ενδιδ έν τῶι Διδύμου was intended. It would naturally be taken to represent ἐνδίδ(ην).

8 όρχηςθ' could be accepted and then e.g. [ἐρό]εςς' Ἄβανθι. I do not know whether there resides in this name a clue to the problem of 1231 fr. 15, 2 (Σμ. ā 11, 10), where the ending]ανθι recurs. ii 6 seqq. Nouns or adjectives, perhaps belonging to a description of some work of art in a temple.

Fr. 12 6] $\epsilon\omega c$ probably the end of an adverb. 7 θa] $v\mu\dot{a}c\iota o\nu$.

2300. ALCAEUS.

On the basis of our present knowledge it is reasonable to assign the authorship of the following fragments of Aeolic verse to Alcaeus rather than to Sappho. Fr. 1, which alone is to some extent intelligible, appears to contain simply a legendary narrative, in which the consequences of Helen's infatuation are recounted at some length in a rather conventional way. This might be an illustration of some general reflection, as it is in $\Sigma\mu$. \bar{a} 5, but it does not produce that impression. It appears rather to be comparable with $\lambda\mu$. 26. And the linguistic characteristics, so far as they go, corroborate this view. At least, that is the conclusion I am inclined to come to on the strength of the poetic plural $\delta \delta \mu \rho \nu c \nu$ (fr. 1, 7), the neglect of the syllabic augment $\pi \epsilon \hat{\iota} \theta \epsilon$ (ib. 9), the non-dialectal $\pi o \lambda \hat{\epsilon} a \epsilon$ for $\pi \delta \lambda \lambda o \iota \epsilon$ (ib. 12).

The hand is an angular uncial of the common type attributed to the second or third century and may be compared with P. Ryl. 14, to which the resemblance is very close, 1234, Milne pll. ix, x. μ , with its unusually deep central bow, sometimes lower than the feet of its side strokes, and τ , of which the cross-bar is nearly all on the left-hand side of the upright, are to be remarked. A corrector appears to be responsible for two additions (ll. 4, 17) but neither he nor the writer of the text has contributed a single accent.

Fr. 1 I Between ν and ν the top and bottom of ϵ or ϵ 2 After ϵ how the ink should be combined is very uncertain. Before the first π is a dot just below the level of the tops of the letters, possibly representing ι ; neither π has its crossbar and either might be divided to represent two letters (the first would be ϵ or ϵ); the ink on the line after the second might also represent two the letter following ϵ only two dots on the line are left; next, the lower left-hand arc of a circle followed, after a gap, by a trace level with the tops of the letters, ω probable, if only one letter is repre-12 [, the lower part of a stroke sloping slightly to right 13]., the lower part of an upright with the foot slightly hooked to right 16]., a dot level with the tops of the letters Between δ and λ the traces suggest the top of ι not ϵ 17 ...[, the lower part of an upright, perhaps slightly concave, followed by a cross-stroke as of γ ; only one letter might be represented. In the following gap there is room for two narrow or one broad letter [, an upright, e as well as a possible 18]..[, a dot above the tops of the letters followed by the upper part of an upright 19]...[, the upper end of a stroke starting slightly above the level of the letters and descending to right, followed by the upper part of two uprights (perhaps μ) and the upper part of ϵ , ϵ , or the left-hand stroke of ω .[, the middle part of a stroke sloping slightly to right

Fr. 1 3 seqq. For the sense cf. Σμ. ā 5, 6 seqq. and the Addenda in this volume, p. 122. 3 seq. For the words cf. Σμ. ā 2, 6 App. ἐπτόαισεν οτ ἐπτόαισας?

4 Αργείας, but Αἰολήιαν 2165 fr. 1 i 6. See Αμ. liv. For the mistaken trema cf. e.g. 1233 13, 3 I should have supposed: Τροΐωι δ' ἐπ' ἄνδρι, but though ι προσγεγραμμένον might have been

neglected after ω the evidence is against the likelihood of its being neglected after a. On the face of it, therefore, $\xi[\epsilon]va\pi \acute{a}\tau a$ prescribes $T\rho oi\omega \delta$ ' $\mathring{v}\pi$ ' $\mathring{a}v\delta\rho oc$ and, since there exists an active $\mathring{\epsilon}\kappa\mu a\acute{l}\nu\omega$, there is no special improbability about this, though $\mathring{v}\pi\acute{o}$ more usually accompanies the means or the emotion.

5 I cannot determine the proximity of the two pieces of papyrus, between which ξ [and] $\nu a \pi a \tau a$ are divided, with sufficient accuracy to say whether $\xi \epsilon \iota \nu$ or $\xi \epsilon \nu \nu$ is more like to have been employed to solve the problem presented by the dialectally requisite but metrically intractable $\xi \epsilon \nu a \pi a \tau a$.

 $\pi \iota \pi$ [: I should guess ' $\pi \iota \pi$ [$\delta \nu \tau o \nu$, 'over the sea'. The prodelision not indicated, see note on Addenda to 1231, etc., 2, p. 122.

- 7 δόμοις: see Άμ. xlvi.
- $9 \pi \epsilon \hat{\imath} \theta$: there is no synaphaea between the second and third lines of the Sapphic stanza and the imperative can hardly be in question in the context. $\pi \epsilon \hat{\imath} \theta$ is therefore to be accepted as a genuine example of the neglect of the syllabic augment in 'normal' surroundings. See $\Sigma \mu$. xli.
 - 9 seq. $\Lambda \dot{\eta} \delta a c \mid \pi a \hat{\imath} \mid \delta a \Delta [io] c \tau \epsilon$?
- 12 πολέας: Homeric not dialectal.
 13 Τρώων: the insertion of ι (by the original hand) is mistaken. Τρώς, Τροΐα (Troy, $\Sigma \mu$. \bar{a} 5, 9), Τρόιος (Trojan, above l. 4) are the Aeolic forms we must expect.

 $\pi\epsilon\delta i\omega$: I suppose $\pi\epsilon\delta i\omega i$ to be intended. Cf. $\Sigma\mu$. xix seqq. (which needs correction in some points).

Then possibly $\delta a \mu \epsilon \nu \tau$.

- 15 seq. In the *Iliad* 'chariots' are commonly 'broken', men 'fall' or 'lie' 'in the dust'. I can suggest no suitable verb (at the beginning of l. 16?) by means of which 'chariots' and 'in the dust' can be combined.
- I call attention, in case $\tilde{\eta}\mu$] $\pi\epsilon\nu$ or the like may be thought of, to the remarks on the use of paragogic ν to effect lengthening at $\Sigma\mu$. lxxiii (now to be amplified). The third person plural of an aorist passive avoids this difficulty.

16 In the Iliad always ε. Άχαιοί.

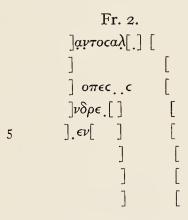

β β

17 ...[]νοντο: ' $c\tau[\epsilon i]$ νοντο, with which the indications are compatible, would account for the variants. But I cannot explain why ' $c\tau\epsilon i$ νοντο, with its Ionic treatment of f, should have been preferred to ' $c\tau\epsilon i$ νωντο, which is true to dialect, has no metrical disadvantage, and is perhaps found (in its participle?) at $A\mu$. 158.

 $\phi \acute{o} \nu \omega$: if the genitive is correct, perhaps 'was filled' is to be supplemented. But I am inclined to

suspect that the dative was intended, 'was wetted' or 'reddened' 'with blood'.

18 I have looked for a river of the Troad, of which 'flowed with blood' might have been said, but find none ending in -evc.

• Fr. 2 On the strength of the evidence of the fibres I should locate this fragment at the top of the next column to the right of that in fr. 1.

3 Before o no sign of ink except the right-hand end of a horizontal stroke just off the line, though

the surface does not show any damage Between c and c a stroke sloping upwards to right, e.g. δ , not λ , followed at an interval by an upright, which, if ι , requires a narrow letter between itself and the preceding δ , e.g. $\delta[o]\iota c$ 4.[, c possible though not particularly suggested

(a)		Fr. 3.

	5	$]\omega au[$
		$]\kappa ho[$

Frr. 3 (a), (b) I am fairly confident that these two fragments are shown in the correct relation. I am not sure, though I think it likely, that the traces in (a) 3 are the tops of $a\kappa$ in (b) I

⁽a) I]., a headless upright, the foot slightly hooked to right 2]., perhaps the base of ζ ; the ink looks like a circumflex on the line with a faint stroke rising to right from its left-hand side .[, the hooked foot of an upright, perhaps ϵ or ϵ

⁽b) 2 Above]0 a trace not accounted for .[, an upright 4]., perhaps the upper right-hand arc of 0 or ρ , but only a trace on a single displaced fibre .[, the upper part of a stroke sloping slightly to right

2301. ALCAEUS?

The chief interest of the following fragments of Lesbian verse, provisionally attributed to Alcaeus, is the problems presented by the words which occur in fr. 2, 3-4 and fr. 6, 3, and of these I can offer no solution.

The hand is to be compared with that of P. Flor. 112—in fact, so far as one may base an opinion on a fascimile, I think the writer may well be the same—and ascribed, in my estimation, to the second rather than the third century. The corrections and a majority of the lection signs are in a distinguishable ink.

5 κήναςᾳ[]ν β λής.[].]αδίω[5].μεχρι[].τονατ[].[

Fr. 5 The proximity of these two fragments is certain but they may not stand in the exact relation shown

2] γ or] τ 3 .[, an upright with traces of ink to its right, perhaps ν 6 After β the top curve of a circle followed by the top of an upright .[, the left-hand side of a circular letter

Fr. 6 3 Or possibly $]\beta$ 5]., on the line the end of a stroke descending from the left, e.g. α 6]., traces on the line and touching the cross-stroke of τ ; neither κ nor ϵ suggested

	Fr. 8.	Fr. 9.	Fr. 10.
Fr. 7.			
] $ u$ o $\eta\mu\mu$ [$\kappa[$	$].\omega[$
]	$]$ μήνὄν $oldsymbol{\iota}[$	$\mu[$	$]\lambda$.[
] $cινeta ho[$	$].\lambda\omega[\dots]'[$	$] \underline{ au o}[$	$]\eta\delta\dot{\alpha}[$
]cy[$].\mu\epsilon[$

Fr. 1 (a) In vv. 2-3, 5 with their scholia a reference to the departure of winter and the advent of spring appears to be recognizable. πo] $\lambda v a v \theta \dot{\epsilon} \mu \omega$ may be an epithet of $\tilde{\epsilon} a \rho$, as at Athen. ix 371 c (Numenius), cf. h. Hom. xix 17. Sappho has $\pi o \lambda v a v \theta \dot{\epsilon} \mu \omega i c$ (ϵ 5, 11). In general cf. $\lambda \mu$. 130 $\delta \rho \rho \omega i c$ $\delta \rho \nu i c$

κρ] ύερος πάγος (with . . . τοῦ χειμῶνος . . . διαλύεται) recalls Horace's 'soluitur acris hiems', Carm. i 4, 1, the paraphrase γαλήνη ἔςτι κατὰ τὴν θάλας suggests a supplement such as γελάνα δὲ θαλάς εας επ]ὶ νῶτ' ἔχει.

If $\gamma \lambda a \iota$ is rightly read, the preceding o, above which the papyrus is broken away, should presumably be read as a.

4 υπο apparently by mistake for ἐπά.

5 If ἐπ]ὶ νῶτ' ἔχει, for ἐπέχει νῶτα cf. Il. xxi 407, xxiii 190, 238.

6 εὐεοτας τύχοις is an easy guess, especially as $\tau \hat{\eta} c$ εὐ[coίας] is compatible with the scholium, but it involves emendation and neither the first v nor τ can be verified. I suppose τ οιαύτηι is meant for the nominative.

(b) 3 On $\phi \hat{\eta} \rho a$ for $\theta \hat{\eta} \rho a$ see Eust. 101, 45 and 1817, 43, who calls it Aeolic; it was not known to be Lesbian.

Frr. 2-3 I am by no means sure that these two fragments do not belong to the same column

and in fact that the coronis against fr. 2, 6 is not the same as that against fr. 3, 1-2, in which case only one verse will be missing. However this may be, a paragraphus is omitted between ll. 5-6 of fr. 3.

. **Fr. 2** 3 -άτται perhaps a dative.

4 Presumably $\tilde{ai} \mu(\epsilon)$ or $\mu(oi) \epsilon \tilde{a} \epsilon [$, which leaves $\epsilon \tilde{v} \epsilon \tau \tilde{o} \nu$ to be accounted for. The alternative possibility, $\epsilon \tilde{v} \epsilon \tau \tilde{o} \nu a i$ is not more explicable.

6 The dot over ι may be the upper of a pair denoting cancellation. $\epsilon \tau i[\chi] \mu \alpha$ does not look as if it had been written but I cannot rule the possibility quite out.

- Fr. 3 3 $\mu\epsilon\epsilon\delta$ [this spelling is also found (after correction) in $\Sigma\mu$. \bar{a} 7, 6. In 2293 fr. 1 iii 18 $\mu\epsilon\zeta\sigma\nu$ appears in a lemma and this is what one would expect $-\gamma t$ to produce in Lesbian.
- **Fr. 4** 2 β] $\alpha\theta\delta\eta\nu$ pres. inf. act. or $\dot{\epsilon}\beta$] $\alpha\theta\delta\eta\nu$ 1st p. sing. or 3rd p. plur. imperf. ind. act. of the Lesbian equivalent of $\beta\epsilon\eta\theta\epsilon\hat{\imath}\nu$.
 - Fr. 5 6 I could not rule βολλής out.

2302. ALCAEUS.

Not much hesitation will be felt in ascribing to Alcaeus the following pieces of Aeolic verse, containing parts of at least two and perhaps more poems, although so far as I have noticed there is no verbal coincidence with anything for which there is evidence of his authorship. The theme of fr. 4, 1–8 should be recognizable, since a relatively small proportion of the verses appears to be lost, but I have had different ideas about it at different times and can come to no settled opinion. I should not be surprised if it were found to be concerned with the power of Love. The next piece (or at any rate the eight verses following) seems to open and end with references to some alfresco festivity.

The hand is a firm uncial of good size which may be compared with 406, P. Berol. 9766 (BKT ii pl. 2), and dated in the second or third century. There is an unpublished Pindar in a very similar hand which I doubt whether I should in some circumstances be able to distinguish. The original copyist appears to be responsible for some of the lection signs (accents as well as tremas and apostrophes), a corrector with a thinner pen added others, among them ὑποδιαςτολαί at fr. 4, 8 and 9.

	Fr. 1.		Fr. 1.
].] 5		5	

Fr. 1 The appearance of both front and back makes it pretty certain that this scrap comes from the neighbourhood of the left-hand side of fr. 4. None of the cross-fibres can be traced in fr. 4, but this fact would not prove that it did not come from the same column. (See the palaeographical note on that fragment.) If, however, I am right in recognizing ends of lines, that would prove that it came from a different—presumably the immediately preceding—column. As the blank space after fr. 4, 16 shows, the blank space after l. 6 may coincide with the end of a piece, or, it would be better to say, does not necessarily indicate the bottom of a column

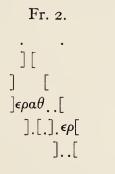

2], an upright 3], the lower part of a stroke descending from left, a or λ 5. [, on the

line the lower left-hand arc of a circle, consistent with o or ω

Fr. 1 2 Probably]cc

3 Probably] adaice [, of which several articulations are possible.

5 Probably χόλο[ν.

Fr. 2 The surface above l. I is largely scoured off but I think writing would have left some trace. I cannot attach this scrap either to the top left-hand side of fr. 4 or to fr. I, to both of which it has resemblances

I After θ perhaps the base of o 2].[, the tip of a stroke level with the tops of the letters]., the right-hand stroke of α , δ , or λ 3]., traces compatible with the right-hand ends of the top and middle stroke of ϵ , but the second perhaps illusory.[, the top left-hand arc of a circle

```

Fr. 4 is made up of five pieces which do not touch (some of them themselves made up of smaller

pieces which do touch) located in the following ways:

When the top line of (b) is placed level with the top line of (a) the fibres on which the lower lines of (b) are written may be traced to the left in (a) as far as a 'joint' where the preceding 'sheet' of the roll starts a new set of fibres. The part of (a) above 1.8 preserves almost exclusively this set and the corresponding part of (b) therefore affords no evidence.

I I should judge that frr. 1-3 all come from this left-hand 'sheet'.

The interval between (b) and (a) is fixed within close limits by the fibres of the back which can be traced downwards from (b) into the projecting piece of (a) containing parts of ll. 15 seq. and the following blank space. I say 'within close limits' because fibres are liable to wander from the straight and on the back there are no lines of writing by which their evidence may be controlled.

The position of (c) is similarly determined by cross-fibres from (a) and vertical fibres from (b)

and by the correspondence of the blank spaces in (a) and (c) between ll. 16-17.

The vertical positions of (d) and (e) relatively to one another and to (a) are likewise fixed by the cross-fibres, and the horizontal position of (e) relatively to (a) by the fibres of their backs. I could not establish the horizontal position of (d) by means of the fibres of the back, but its front contains a length

of the 'joint' referred to above and this fixes it within close limits.

2 Of λ [only the upper part; δ and perhaps μ , ν are other possi-1]., the foot of an upright bilities].[, traces on the line, perhaps parts of two letters]., a trace slightly below the tops of the letters, apparently too low for the overhang of ϵ ; perhaps part of \circ Of δ [only the extreme left-hand angle, a and perhaps other letters not ruled out 4 After w prima facie c. This is followed by two dots close together level with the tops of the letters; if these formed part of one broad letter, only one more may be missing between it and v ...[, the upper part of δ or λ followed by a trace level with the middle of the letters having the left-hand end of a mark of length or acute accent above it]., a 7]., on the line tallish upright close to the edge of the break; I should guess η or ν rather than ι the right-hand arc of a small circle, not like β (l. 3) or ϕ (l. 16), possibly ϕ or ω Between λ and ϵ the top and bottom of θ or ϵ ; after ϵ the foot of an upright followed by some traces, level with the tops of the letters, which have soaked through on the under layer. Possibly ϵ [should be written I prefer 8]., a short nearly horizontal stroke just off]δ to]λ though the base line has entirely disappeared the line, e.g. κ Presumably [o], since a letter written on the line should have left a trace Of τ only the tail but the spacing suggests it]', in some respects more like the loop of ρ , but abnormally high [, an upright close to the break 10], a trace slightly above the general level 11]0, the right-hand arc of a circle, more suggesting ω λ [, the upper part of a stroke sloping or curving to right 12] ρ not particularly suggested but the trace is compatible with the right-hand edge of the loop 13 Of κ only the end of the upper arm. We have no specimen of χ [, the tip of an upright After ϵ a stroke starting below the line and rising with a slight slope to right, perhaps π (cf. l. 21). The traces to its right are partly on the underlayer and may be parts of only one letter]...[, the lower part of an upright, the lower part of an upright descending well below the line, the start of a 15 After o an upright Between v and v one broad letter would suffice stroke ascending to right After ν the foot of an upright 17]., the foot of an upright? 18]., scattered traces off the line, perhaps parts of two letters, oc? .[, prima facie the bottom left-hand angle of δ]., the right-hand part of a cross-stroke, as of γ , followed by a dot at the same level, e.g. γa , $\tau \iota$, or the like 20 Of δ only the left-hand angle, of ρ only the tail [, the foot of an dot off the line, perhaps a upright slightly below the line 21 ϵ represented only by the lower end of the straight back .[, apparently the foot of an upright 22 Between $]\nu$ and ν the middle of a stroke ascending to right 24 Of μ only the right-hand upright and a faint trace to its left [, a dot on the line upright, presumably v though damage to the surface has removed all trace of the diagonal Of a only the end of the tail], a dot level with the tops of the letters; if e.g. ψ , no letter between it and ç would be wanted 26].[, I believe, the left-hand branch of v, but could not rule out the upper part of the right-hand stroke of a triangular letter

Fr. 4 1-8 It is evident that there is a change of metre after l. 8. Ll. 9 seqq. can hardly be anything but Asclepiads and, if we assume that ll. 1-8 started on the same alinement as must be postulated for those, the metre of these might be recognized as what Hephaestion calls $Alo\lambda\iota\kappa\delta\nu$ $\xi\pi oc$ $\tau\delta$ $\kappa a\tau a\lambda\eta\kappa\tau\iota\kappa\delta\nu$, namely $\times\times$ -00-00-00-00 (p. 22 Consbr.), for the employment of which by Alcaeus μ . 130 is evidence. But the assumption is not inevitable—in other manuscripts of Alcaeus poems following one another in the same column are found with different alinements, e.g. 1789 (see μ . 5), 1233 (see μ . 28), 2299 fr. 6?—and is attended by some difficulties. One, which attends the assumption of any single alinement of ll. 1-8 (whether the same as that of ll. 9 seqq. or different from it) and any single metre in them, is that before the first visible letter of l. 1 there would be less room available and a syllable more to be accommodated in it than in any of the following verses. But I

believe it to be illusory. I know of no evidence for indention within the single composition and the

metre is prima facie homogeneous.

The poem represented by ll. 1-8 was presumably constructed in quatrains, that being the invariable practice of Alcaeus so far as we can follow it $(\Sigma \mu$. Introd. xvi). Whether the two quatrains partially preserved here formed a complete piece there is nothing positive to show, but v. I could be interpreted in such a way as not to be unsuitable to a beginning and pieces complete in eight lines are not rare. Others are $A\mu$. 14, 27–28, probably 119, and apparently the second 8 lines of this very fragment (see below).

I will not venture to express a view about the general theme of ll. 1-8. About the detail I have

the following remarks to offer.

r seq. 'It was a very bright (stupid) idea of' so-and-so's; ἐνόησεν might refer either to a 'notion' or a 'device'. The choice depends on whether $\lambda a c \theta$ ', which must almost certainly be an infinitive, is passive or middle. -λắcθαι is compatible with perfect, aorist, or present infinitives and there are too many to make speculation profitable. I will mention only ἔλλαςθαι (if that is the correct equivalent

of ἰλᾶcθαι, ἴλαcθαι) as possibly appropriate.

In view of the presumed necessity of keeping the syllables before νότατον to the same written length as the number less by one in the remaining lines, ἀπαλα]μνότατον has some claims to consideration. (Compare Άμ. 122 ώς γὰρ δήποτ' Άριστόδαμον φαῖς' οὐκ ἀπάλαμνον . . . λόγον εἴπην, which our verse might resemble in containing a reference to some predecessor.) But I must confess that my own opinion is that the sense required is the opposite.

3 Κρονίδα βατίλησε Άμ. 150, cf. 22, 9. 4 seq. 'Descended', 'entered' is to be supplied in one of these lines.]ε Άίδαο δῶμα Άμ. 32, 15, cf. 38 (a) 5, $\Sigma \mu$. $\bar{\gamma}$ 3, 3 App.

5 seq. An obvious reconstruction is 'without his help no labour prospers'. If a monosyllable is

required before $o\vec{v}]\delta' \epsilon \hat{\iota} c$, it is by no means easy to think of one that is tolerable.

6 Prima facie ἀ]λλὰ τὰ πάντ' ἀπ[, but I am not certain of the admissibility of the article and should prefer to operate with $]\lambda\lambda\alpha\tau\alpha \ \pi\acute{a}\nu \tau'$, if that conveyed any meaning to me, or to make $\tau\alpha$ the relative.

7 ἐν κάλα θεῖς could be made out of the traces and this with]δὲ τᾶςλα κάκο[ιςιν, which seems very plausible, inclines me to infer that the verse consisted of two statements of similar form balancing one another; 'having put fair in foul and' (say) 'a mixture of bad with the good' would be palaeographically and verbally acceptable apart from two objections. First, I should say the ink preceding εν was not compatible with ϵ (- ϵ); secondly, no participle will scan in the position before $\delta \epsilon$ and we should have to assume a variation in the construction, for example, ἐκέραcce instead of κεράccaιc.

For the accentuation of $\tau \delta \lambda \alpha I$ know of no nearer comparison than $\pi \omega \lambda \alpha \lambda \nu \lambda \mu$. 47, 5.

8 Although so nearly complete this verse is puzzling both in itself and in its connexion with the preceding. No syllable is lost at the end so that $-\theta \eta \nu$, $-\theta \eta \iota(\epsilon)$ are the only forms we need reckon with. Although the vocalization is not the customary, I cannot see any room for doubt that the agrist infinitive passive of $\delta\epsilon\rho\omega$ is to be recognized. $\delta\epsilon\rho\omega$ or $\delta\epsilon \delta\rho\omega$ in the deserved flaying would have a high degree of probability in some contexts.

After ἀντιλε[.]ν., which I take unquestionably to represent ἀντὶ λεοντ-, two syllables are missing of which one appears to be inevitably -oc. (After this, in view of the relatively small spread of the

letters o and c, there might be room for two more letters in the gap.)

To say of a brave or savage person or, for example, a dog, that 'he was fit to be flayed for a lion'or the sentence could have been put with a negative, oil a description is compatible with the traces, in an interrogative form—is not perhaps very surprising, but it seems to be introduced very abruptly here. I should perhaps add that I have envisaged the possibility that άξιος is a genitive and λεόντιον the equivalent of $\lambda \epsilon o \nu \tau la$ (i.e. $\lambda \epsilon o \nu \tau \hat{\eta}$) without approaching a satisfactory solution. I call attention to the marginal note at 2297 fr. 1, 8 seq., though it brings me no light.

Ll. 9-16 are separated from ll. 17-26, which appear to be in the same metre though they are not sufficiently preserved for certainty on this point to be attainable, by a blank space exactly equivalent to two lines of writing with their interlinear room. This may mean that there was for some reason an omission which was never made good. Whatever the explanation, since such blanks are not normally used to indicate the end of a piece, we cannot infer that ll. 9-16 formed a complete poem. But they

may have done so. As far as I see ll. 9-16 contain third persons, ll. 17-26 the first person, but the

clues are slight (see on l. 17 below).

9 seq. \tilde{I} infer from the facts that Kνπρόγενη(a) has after it a middle stop and is almost immediately followed by $\epsilon\epsilon$, that it is a vocative and, as a consequence, that $\Delta aμοανακτιδ$ [is the nominative $\Delta aμοανακτιδαι\epsilon$ and the subject of the verb. The surviving letters are in themselves susceptible of an interpretation in which Kνπρογένηα is nominative and $\epsilon\epsilon$ anticipates the vocative $\Delta aμοανακτίδα$. If the meaning of the verb καταήε cατο could be determined, the ambiguity might be resolved, but I can neither translate it nor even account for its form. (A word beginning καταη[also at Aμ. 68, 4.)

 $\epsilon \nu \ldots \kappa \dot{\alpha} \lambda \omega \iota$: there is also a certain ambiguity about this, since we do not know whether the phrase is here used absolutely or whether a noun was expressed and has disappeared at the beginning

of l. 10 (or possibly even of l. 9).

 $\pi \grave{a}\rho \ \grave{\epsilon} \grave{\lambda} \acute{a}a\iota c(\')$ might be either accusative or dative. I am fairly confident that it was accusative and followed by $\grave{\epsilon}\rho o \acute{\epsilon}cca\iota c$. For the accusative so used compare $A\mu$. 86, 4 $\pi o \tau \acute{a}\mu \omega \ \pi \grave{a}\rho \ \acute{o}\chi \theta a\iota c$. But $\grave{\epsilon}\rho \acute{o}\epsilon cca\nu$, if there was reason to prefer it, could not be ruled out.

11 εὐφρο] εύναις 'carousals' would apparently be suitable to the context.

For $\delta(\epsilon)l\gamma\omega$ cf. $A\mu$. **225.** I have no precise parallel to the 'opening of the gates of spring', the nearest I find being Pindar's 'flinging wide the gates of songs' (Ol. vi 44). But Pindar fr. 75 οἰχθέντος ώρῶν θαλάμου εἴοδμον ἐπάγ⟨η⟩ςιν ἔαρ φυτὰ νεκτάρεα is not very dissimilar.

ἔαρος: ἦρος Άμ. **130,** Ι (ἤρινον Άμ. **58,** 10).

15 seq. νεάνι[αι . . . cτεφανώμενοι.

17 I should guess a verb of the form $\delta\iota\epsilon[\lambda\dot{\eta}\lambda a]\mu a[\iota \text{ or } \delta\iota\epsilon[\lambda\epsilon\xi\dot{a}]\mu a[\nu.\ \dot{\epsilon}\pi\dot{a}\epsilon\rho\rho\sigma\nu,\dot{\epsilon}]\xi\dot{\epsilon}\phi\nu\gamma\sigma\nu$ (ll. 19, 21), equivocal in themselves, lend support to and receive it from a first person here.

19 ἐπάερρον: ἔπαρθ(αι), not ἐπάερθ(αι), $\Sigma \mu$. ε 4, 10. 20 seq. 'I fled from lovely (Lesb)os to . . . '?

Fr. 5 1 .[, an upright, perhaps ι 2 Above]a some ink but apparently not \acute{a} 3]., apparently the overhang of \acute{c} The stop rather elongated, but not, I think, \acute{e} .[, prima facie π , but the surface is much rubbed

2303. ALCAEUS.

In $\mathcal{A}\mu$. 28, and probably in 26 and 110, Alcaeus employs lyric metres (Sapphic stanzas and Asclepiads) for the purpose of short legendary narratives. The largest of the following fragments seems to be another specimen of the same sort. The poet recounts in Alcaic stanzas how the Locrian Ajax offended Pallas by carrying off Cassandra from beside her image and how Pallas livid with anger raised up a storm to punish him.

The hand, which has a quavery appearance, belongs to the upright freely serifed type exemplified by P. Gr. Vind. 19996 a and b (Mitt. P.E.R. NS 1), P. du Fayoum 1 (B. Soc. Alex. NS 3, pl. ix), P. Berol. 9775 (Schubart, Pap. gr. 11 b), though it has not the usual v-centred M, and I should assign it to the first century. Some of the lection

signs (including all the signs of elision) are in a dark, others in a lighter, ink, some are made with a thick, others with a thin, point. I am not sure whether the participation of three hands may not be recognizable.

Fr. 1 (a) Many of the surface fibres are loose and displaced. The readings towards the left-hand

edge are particularly precarious.

I Before χ_{ξ} [the bases of about 7 letters 2 About midway between a and ξ the tip of an upright; I am doubtful whether a.[.] ξ or a[.]. ξ more correctly represents the facts 3]..[possibly $\delta \epsilon$ or $a \epsilon$ Above \bar{a} a dot of ink not accounted for; I cannot make \bar{a} out of what remains 9 I am not sure that there is room for 3 letters between τ and a; if there is, ι would be more easily accommodated than ρ II In the right-hand margin part of a 3-line note

Fr. 1 (b) I think it possible that this scrap contains letters of fr. 1 (a) 10-12 standing on the left of those preserved in the main fragment. If so, perhaps the right-hand transcript should run:

]ν. ἀ δὲ δεῖνον $] \pi[\epsilon] \lambda[\iota] δνώθει ca$ πόν] το[ν], ἐκ

But I can verify neither the location nor the readings

Fr. 2 5 .[, a small loop level with the tops of the letters, perhaps τ

Fr. 3.

| νετροτ[
|]λετο οτ[
| κο[
|]
| κτίδαιε[
|]ξέτω·
|] c
| βραχη[
|] . cαγων[

Fr. 3 10]., an upright stroke sloping slightly to the right, the slope much accentuated towards the upper end, probably ι ; above it a trace of ink on the edge of the break, apparently by the same hand

Fr. 4 I Of i only the stem; I should have preferred τ but for the spacing, since there are serifs

on both sides. If ι , perhaps ϵ or ω are alternatives for the following letter 2], the lower end of a stroke descending from left and finished with a small upward hook ν [, only the hook of the left-hand branch; χ may be possible 3 Between ν and ν a slanting stroke not accounted for which produces with the serif of ν the appearance of $\nu\delta$ written as a monogram Above the first ϵ traces of ink by a different hand

Fr. 1 3 seqq. 'Of Pallas who most of all the gods hates the sacrilegious'.

4 The scansion by synizesis is rare in Alcaeus (μ , lxi), but $\theta \epsilon o \epsilon c \ell \lambda \eta c$, at present attested only in late authors, is, as I hope to bring evidence to show, an old Ionic word, in which such a scansion would be normal. The same word may have occurred in μ . 37, where the bulk of the verse has

perished but ἀντὶ τοῦ ἱεροςυ[λ() stands in the margin.

6 A statement to the effect that Aeolic had no dual appears in several places in ancient grammatical writings (Theodos. κάν. Gr. Gr. IV (i) 134; Choerob. $c\chi \delta \lambda$. Gr. Gr. IV (ii) 34; Sophron. ἐκ τῶν τοῦ Χάρακος Gr. Gr. IV (ii) 419; cf. An. Par. iv 218, Ald. Hort. Adon. 191, An. Ox. iv 174, Greg. Cor. 606 Sch.), all of which may be supposed to derive from a single statement whether of Herodian or another. There is no particular reason why Lesbian should not have said ἄμφοις, as Ionic δύοις (Hipponax P.S.I. 1089, 6). But since we find not only ἄμφοιν here but a word ending in]τᾶιν at Σμ. ā 12, 12, we may decline to accept the general validity of the rule.

ὅςςοις' $\Sigma \mu$. inc. lib. 23 throws no light on the matter since the form ὅςςοιν had no existence, the

genitive and dative of ὅccϵ being ὅccων, ὅccoιc-ι in all times and places.

9 Cf. θανάτοιο δότειρα Hes. Op. 356.

Page suggests maîda 4] loc for the beginning of the line. It is acceptable but I cannot verify.

10 οφρυείν: abnormal? V. Aμ. xlix.

11 πελιδνώθειτα is supplied by a verse quoted by Suidas in ὑποδράξ, ἡ δὲ πελιδνώθειτα καὶ ὅμματι λοξὸν ὑποδράξ ὀστομένη, which may have occurred in a similar context. The offence of Ajax was related by Arctinus in the Ἰλίου πέρτις, by Callimachus in the first book of the Αἴτια, and by Euphorion.

Whether or not the location of fr. I (b) is correct, οίνοπα may be said to imply πόντον.

12 If ἀφάντοι[c qualifies θυέλλαις, it does not seem possible to give it its usual meaning. ἀφάτοις

would be comprehensible.

I must also confess to some bewilderment at ἐκ. ἐκκυκῶν is neither recorded nor to be expected. The words which have survived do not appear reconcilable with the sense 'she threw the waves into turmoil by violent winds', which is what I should have looked for.

- Fr. 2 3 å β aca ν [: Boeotian $\epsilon i\beta$ implies pan-Hellenic $\dot{\eta}\beta$ -, but Lesbian presents å β here and at $A\mu$. 14, 2, 22, 11, 81, 2?; cf. also 2307 fr. 16, 3.
 - Fr. 3 Compatible with Alcaic stanzas.
 - 5 Κλεανακτίδαν, Άρχεανακτίδαν Άμ. 55, 23-4, Δαμοανακτιδ[2302 fr. 4, 9.
- Fr. 4 2 The interlinear addition, which I cannot explain, is not in the hand of the text nor, apparently, in that of the writer of the note at fr. 3, 2.

2304. ALCAEUS.

It will generally be thought likely that the following remnants of Lesbian verse should, in view of their vocabulary and the conjunction of metres found in them, be attributed to Alcaeus rather than to Sappho, little as is left to go upon. But the contents are of less interest than the hand. The circular letters, $\epsilon \theta \circ c \omega$, written on

¹ $\theta\epsilon\delta[c\nu\lambda\iota\nu]$ in Hipponax has now been recognized at **2176** fr. 1, 1, with the help of $i\epsilon\rho\delta c\nu\lambda\iota\nu$, as must be read ib. l. 14.

a much smaller scale than the rest and well off the base line, exemplify the so-called biblical uncial type to be seen, for instance, in **661**, but η , ν , π , τ are taller in proportion to their width than is usual in that type and μ is not the straight-sided letter found in it but has the form seen in the Hawara Homer (Kenyon, *Palaeography*, pl. xx), **884**, **1084**, **1090**, P. Ryl. iii 514, etc. I should be inclined to put the date in the second half of the second century, at least a hundred years earlier than the document inscribed (at right angles to the length) on the verso in a hand much resembling that of P. Fayum 20. The lection signs appear to be in the same hand as the text.

2305. ALCAEUS?

It appears reasonable to assume, though it cannot be conclusively proved, that the following scrap contains Lesbian verse. The metre is compatible with Asclepiads and the collocation of letters seen in l. 10 recurs in Alcaeus ($A\mu$. 112, 1). But I see no means of verifying a conjectural ascription of the authorship to Alcaeus either by the contents or the character of the language.

The hand is a well-executed example of the common second- to third-century angular type.

I Between ϵ and α the lower part of a slightly slanting upright which, with the spacing, suggests τ . Above the place where the right-hand end of its cross-stroke would have come is a short upright in the same hand, which might be ', though it is unlike that in l. 4 2 γ , which stands on a damaged place where two scraps are joined, is not at all satisfactory but λ seems no likelier 3]., perhaps the top of an upright Between ϵ and η apparently λ , though owing to damage it does not now much resemble the λ of this hand Between η and ι only scattered traces 4]., faint traces compatible with σ 6] $\mu \epsilon \gamma$ is compatible with the ink, but of μ only the top of the second upright remains and something not accounted for stands over the right-hand end of the cross-stroke of γ After τ perhaps the tips of the opposite sides of ω 7]..[, two strokes meeting to form an apex, as of θ , followed by a small loop, e.g. β or ρ 10]., the lower end of a stroke descending from left, α probable

1 κύμβαλα, κρέμβαλα, cάμβαλα are among the possible choices.

I can suggest nothing better than $\kappa a i \tau(oi)$ eccer' d[, but one would expect the elision to be indicated.

2 If cάμβαλα occurred in l. 1, one might think of εὐμάριδας here, but δ was not written and the a

seems properly to have been long.

10 It is to be pointed out that the line $\tilde{\eta}\lambda\theta\epsilon\epsilon\epsilon$ $\tilde{\epsilon}\kappa$ περάτων γας $\tilde{\epsilon}\lambda\epsilon\phi$ αντίναν ($A\mu$. 112, 1) was pretty certainly the first of a poem. If, therefore, it is to be recognized here, the metrical compatibility with it of what remains of the preceding lines is irrelevant.

2306. Commentary on Alcaeus.

Something will be said elsewhere about the general character of the commentaries on Alcaeus and Sappho printed in this volume. Here it need only be remarked that the present example affords glimpses of two poems of the former not otherwise recognizably preserved. The first appears to end with a warning from the poet to some opponent and his followers that they will have to drain the draught he has mixed and will find it more than they can hold. The second is addressed to a man who aided an expelled tyrant to get back, though Alcaeus bears him no grudge for this. There is a third poem, commented on in the barely existing second column, which seems to be the same as one partly known from a long quotation, partly from a roll now first published and contains under the figure of a ship in a storm an allusion to the troubles caused by this same tyrant at Mytilene, but the commentary adds nothing directly to our knowledge. The metre of the first piece is the acatalectic dactylic tetrameter, so far as it goes, of the third the Alcaic stanza; that of the second is not clear from the lemmata, though Asclepiads may be suspected.

The hand is a small, rather featureless uncial which may be assigned to the second century. Cf. P. Berol. 9780v. (Hierocles, ἠθικὴ cτοιχείωςις).

Col. i 2] $\pi\rho\sigma$ does not seem to be a possible reading 6]., perhaps a 7].[, a circular letter 14]., the upper and lower tips of the right-hand side of κ or χ 22]c possible 23]. perhaps the right-hand side of κ or c, but neither quite satisfactory; v not impossible 25 $\mu\nu\alpha\mu\omega\nu$ could be read, but I think an apex too much was written between a and μ and simply $\mu\nu\alpha\mu\nu\nu$ meant 27] $a\kappa\alpha$ possible After $\tau\alpha$ there may be the tops of two letters, $i\tau$ [] ν possible 29]., ν or τ

Col. ii r .[, apparently an upright 2]., γ or τ 5 After a the base of λ or ν probable 7 ..[, $\iota\nu$ not verifiable 22 .[, the top of an upright 27 .[, the left-hand side of a small circle, o or possibly ϵ 34 Of τ [only the left-hand end of the cross-stroke; π not ruled out 36 .[, the left-hand side of a circular letter

Col. i 5 seqq. I call attention to the possibilities: 5γ] $\dot{\epsilon}\nu o c \sim 7 \gamma \dot{\epsilon}\nu$ [oc; $5 \alpha i \kappa$ [ai $\kappa \epsilon \sim 6 \dot{\epsilon}$] $\dot{a}\nu \kappa a i$. $7 \dot{\epsilon}$ [κ] $\dot{\epsilon}$ νo .

7 seq. I suppose τὰ ὑπὸ coῦ κεκεραςμένα, although έξετε stands in ll. 13 seq.

9 I cannot be sure which of the compounds of $\lambda \epsilon i \pi \epsilon \iota \nu$, meaning 'give out, be exhausted', was used here, but I should guess $\epsilon [\pi \iota \lambda] \epsilon i \psi \epsilon \iota$.

11 seq. ως ἄλος . . . ἀρυτήμενοι, the metre is the same as that of $A\mu$. 132, where the same verbal

form occurs.

For the proverbial expression compare the more modest $\epsilon \kappa \pi i \theta \omega d \nu \tau \lambda \epsilon i \epsilon$ Theor. x 13. The inexhaustibility, not the bitterness, of the draught is the point.

17 This addressee of Alcaeus has not appeared, at any rate recognizably, hitherto. For the comment, apparently made in l. 26, that Μνήμων is a proper name, cf. Schol. Lycophr. v. 241.

19 For the sign in the margin, which occurs four more times in col. ii, compare, e.g., 16 + 696 (Thucydides), P. Flor. 112 (Aristoph. comm.). It has the appearance of an ὀβελὸς περιεςτιγμένος with various degrees of tilt, but does not appear to have the critical significance attributed to that sign (when applied to the text of Plato) by Diogenes Laertius iii 66, nor indeed any other, since the text of a commentary is not treated critically. Nor can it have any particular connexion with the occurrence of the proper name, as may be seen from other places where it is used.

(I take this occasion to remark that the *lemniscus*, which has the same form but is used on sacred texts and with a different significance from the dotted $\partial \beta \epsilon \lambda \delta c$, has escaped the notice of Liddell and

Scott and Lewis and Short.)

22 Leg. ὅττις.

Col. ii It would appear that the trifling remains of this column enable a connexion to be established between ¾μ. 87, of which it is expressly said Μύρειλοε . . . ὁ δηλούμενόε ἐετι καὶ τυραννικὴ κατὰ Μυτιληναίων ἐγειρομένη εύεταειε, and the new fragment 2297 fr. 5. At any rate l. 7 recalls ἔνθεν κῦμα κυλίνδεται and l. 14 χάλαιει δ' ἄγκυρραι, at l. 8 is a mention of Myrsilus and not improbably of his 'return' (to resume the tyranny, cf. col. i 19), while at l. 29 must certainly be recognized ἐν βιμβλίδεεει (with possibly εχοινία at l. 32 or l. 33 or both). If this combination is correct, that suggested in ¾μ. 51 and 87 must be withdrawn.

20 The accent as well as the $\tilde{\epsilon}\kappa\theta\epsilon\epsilon\iota\epsilon$ seems to indicate that this is part of the lemma. As a long shot I suggest $\delta\eta\iota a$ 'rudder'.

2307. COMMENTARY ON ALCAEUS.

The two manuscripts containing poems of Alcaeus, of one of which constituent fragments have been published under nos. 1234, 1360, 2166 (c), and in pp. 130-4 below, of the other under no. 2165, since they possess one piece, must be presumed to have possessed one book, at least, in common. It is, therefore, possible that the remnants here printed of a commentary on poems of Alcaeus some of which are partially preserved in the former may also contain matter referring to poems in the latter. But if this possibility is realized, I have not succeeded in recognizing the fact, and it must be said that very little light is shed on or received from either. Apart from the question of reference to an otherwise existing text, the commentary is not very illuminating in itself. Its general structure, like that of others in this volume, so far as its state of preservation allows one to generalize, is simple. The comment on each piece begins with a lemma (sometimes, and presumably always, the first words¹) followed by a general statement of the circumstances to which the poem relates.² It then proceeds, picking out disconnected phrases for paraphrase and occasionally interjecting a grammatical or historical observation.³ But the paraphrase is often far from lucid and the quotations are neither necessarily complete lines or clauses nor given in the pure form of the original but in a jargon in which the dialect and common speech are liable to be mixed quite arbitrarily.4 The total gain, therefore, would probably not be very great, in the absence of the text commented, even if the commentary were continuous. In its present state of ruin it is hardly any use at all. Although the text, where one has an opportunity of judging, is not particularly correct, it is written in a hand of great fluency and elegance, employing a large variety of letter forms, which may be assigned to the second century.

The appearance of the papyrus is compatible with a position near frr. 12-13 (c) Fr. 82 The bottoms of letters compatible with ναυς, νοτε, etc.

Fr. 1 10 κ^{c} a contraction of which I cannot supply the extended form.

13 If there is any connexion between κλεωνα[and the Κλεανάκτιδαι (Strabo 617)—and it may be supposed that Κλεωναξ and Κλεάναξ are alternatively possible derivatives—the reference here may be to Myrsilus, as appears from the marginal note $A\mu$. 55, 23.

14 This part of the commentary corresponds to Aμ. 46 so that the supplements ἀν-]αίςχυν[τος

and ἀναί[εχυντος suggest themselves.

- 18 The beginning of the comment on $A\mu$. 47. The sense is: $Z\epsilon\hat{v}$ πάτερ, $[\Lambda \dot{v}\delta o\iota \ \mu \dot{\epsilon} \nu \ \dot{a}$ -]]πεςχαλάς $[a\nu\tau\epsilon c\cdot \dot{a}\lambda\gamma o\hat{v}\nu-][\tau\epsilon c\cdot \dot{\epsilon}\pi\dot{\iota} \tau[a\hat{\iota}c\cdot c\nu\mu\phi o\rho a\hat{\iota}c\cdot \dot{\eta}-][\mu\hat{\omega}\nu \ oi \ \Lambda\nu]\delta oi$. The commentator may have taken ἐπαςχάλαντες (see 2166 (ε) 1) for the agrist participle of ἐπαςχάλλω (though ἀςχάλλω has no agrist forms and the analogical form would have -χαλ- not -χαλ-) and therefore interpreted it by what he supposed to be the agrist participle of ἐπαςχαλάω (which has no agrist forms either), which a copyist proceeded to corrupt by interchanging $\epsilon - a$.
- Fr. 2 κ] αθοδ. [(l. 1), κ] αθηκον[(l. 4), καθο]δος τον[(l. 5) may lend each other support, so that this scrap refers to one of the periodical 'returns' of political refugees so often mentioned in connexion with Alcaeus and his opponents.
- $]\eta\epsilon \phi v[\gamma]\hat{\eta}\epsilon$ 'at the time of the .th exile' or 'of the Fr. 3 Col. i 4 seq. Perhaps $\hat{\epsilon}\pi\hat{\iota} \; \mu\hat{\epsilon}\nu \mid [\tau\hat{\eta}\epsilon]$ flight to'. Cf. $A\mu$. 57 marg.

7 $B[v]\kappa\chi\iota$ - $|\delta\iota$.

Fr. 4 4 Άλκ[aίου?

7 Possibly πί]νακίδος with the same reference as πίναξ (l. 2).

9 If καὶ αὕτη γέγραπ[ται, cf. fr. 9, 9 at the beginning of a new piece.

Fr. 6 2 The space admits only $\delta \rho \nu [\iota] \nu$.

Fr. 7 6 Resembles, perhaps fortuitously, fr. 14 i 12.

19 I mention as a mere possibility αἰροῦν]ται μεcί-|την, since we know from Hdt. v 95 that Periander arranged terms between the Athenians and Mytileneans, when they were disputing possession of Sigeum, and ll. 17-21 contain, as far as they go, nothing that excludes this supplement and some syllables that can be made to harmonize with it.

Fr. 9 5 ένοροθεαι might rather have been expected.

8 The beginning of a new piece. The description of its subject would suit 2165 i 1 seqq. but the metre appears to be different. One's first thought would be of $\epsilon \pi i \delta[oi] \mu \iota$ but this would produce neither metre nor, as far as I see, sense. To read $]\eta$ is by no means so attractive, but I see nothing more probable and at least a recognizable verse, ionic a minore, results. $\epsilon \pi \iota \delta[0i] \eta \iota$, intended for an optative, may be worth considering.

Fr. 11 (a) 5 $d\gamma a\theta \delta \nu$.

II seqq. If I am right about the position of fr. II (b), we have at the beginning of this and the next two lines: $\kappa \acute{\epsilon} \kappa [\rho] \upsilon \pi \tau \alpha \iota$, $\rbrack \tau [\![\sigma]\!] \rho \sigma \pi \sigma [\![.]\!] \kappa [\![, \acute{\epsilon} \nu \epsilon \delta \rho \epsilon \upsilon \tau . [\![.]\!]$

Fr. 12 3 τως cf. fr. 14 ii 3, 'as far as', i.e. the lemma extends from ... 'to'

Fr. 14 Col. i contains part of the comment on Άμ. 51, 5 seq. ἀcάμωι] | δ' ἔρματι τυπτομ[έναν. Compare Hesych. in έρμα· . . . τον πετρώδη καὶ ἐπικυματιζόμενον ὥςτε μὴ βλέπειν τόπον τῆς θαλάςςης· καὶ Άνακρέων· ἀςήμων ὑπὲρ ἐρμάτων φορεῦμαι, and similar explanations in Et. Mag. s.v. ἔρματα, Harpocr. s.v. ἔρμα (= Phot., Suid., Zon.), Pollux i 115.

7 φαινόμε- νοι δέ?

10 Anacr. fr. 38.

12 Perhaps cf. fr. 7, 6.

For the position of fr. 16, which would be expected to belong to the bottom of this column, see below.

Col. ii 2 A paragraphus appears to have been omitted below this line.

3 seqq. So Ioann. Compend. iii § 1 οἱ Αἰολεῖς ἔθος ἔχουςιν ἀντὶ μὲν ā τὸ ο̄ τιθέναι.

6 Not $\epsilon i \rho [\eta - | \kappa \epsilon$, though $\epsilon i \rho [\eta - | \kappa \epsilon]$ would be a possible reading.

8 αὐτη̂c I suppose, 'the ship'. But many of the words and expressions following seem more applicable to a $\pi \delta \rho \nu \eta$ than to a ship. The same kind of mixture seems to occur in $A\mu$. 61, 20 seqq.

10 ἀκαθαρεία ἀναπορεύεται corresponds to ψόμμος όξν}ςτείχει . . . καὶ λεύκη. εἴρηται δὲ τὸ λευκός implies that the text of Alcaeus contained also the word λεύκη or λευκός, 'leprosy' or 'white'. The commentator is too muddled to have made clear which, but διὰ τὸ ἔπαρμα 'because of the swelling' obviously refers to the same fact which makes Aristotle Hist. An. 518a12 say that λεύκη is an ἐξάνθημα and on account of which Aeschylus wrote, as I do not doubt he did, at Choeph. 282 λεύκας δὲ κόρςαις . . . ἐπαντέλλειν. There is, so far as I can discover, no word λεθκος as the name of a disease, though the couple ωχρός, ῶχρος may show that it is not theoretically inadmissible.

13 I can give no satisfactory account of δία (δία) . . . κεχώρηκε. Leg. cκέλεα.

16-17 ...]α τε καὶ θαμα[|δρο.[appears to be a lemma paraphrased in ...]. πεπλευκυίαι—γέγονεν (ll. 18–21), and 21-3 ἀλ|λ' οὐ ς.[..]των ἔνεκ[(a) | ται a lemma paraphrased in οὐ διὰ το[?πεπα-|λαιως.[(ll. 23-4). As a guess, $\delta \rho \delta \mu [oica \cdot \mu \acute{\epsilon} \nu \epsilon i \acute{\epsilon}]$, and presumably correct $\acute{\epsilon} \langle \nu \rangle \nu \epsilon \kappa [(a)$.

30 Since in the next line there is a reference to the game of $\pi\epsilon\epsilon\epsilon 0$, there is a chance that $\tau[00]\epsilon$ λεγ]ομένους $\pi \epsilon$ [c-]coύς should be recognized here. Cf. $A\mu$. 113. Fr. 20 does not appear to belong to this

immediate neighbourhood.

Fr. 16 Since this scrap of the commentary plainly refers to $A\mu$. 51, 8-10, it would be natural to suppose that it must form the foot of fr. 14 col. i. But this position seems precluded by the words with which fr. 14 Col. ii begins.

1 Many must have felt dissatisfaction with the repetition ἐν τούτ[ωι οτ -οιcι . . . τούτων λελάθων (Aµ. 51, 7-8). Although the text of Alcaeus preserved in this commentary is not such that one would choose to use it in evidence against a book text,] ετου λελάθων suggests the possibility that τούτων is perhaps due to dittography and that Alcaeus may in fact have written νόςτω λελάθων.

2 seq. εύ]ν τ' ὔμμι τερπε[καὶ πεδὰ [Βύκχιδος

] $\mathring{a}\beta a \iota c$. On Lesbian $\mathring{o}\beta$ - for $\mathring{\eta}\beta$ - see 2303 fr. 2, 3.

Fr. 20 See fr. 14 ii 30 note.

2308. AEOLIC VERSES?

The following fragment, to which others may have to be added after further search, is prima facie, though not certainly, written in Aeolic and in a metre, so far as can be judged by what remains, either common to all writers in this dialect (if the long Asclepiad) or employed by Alcaeus (if the short Asclepiad) or Sappho (if the Ionics exemplified in 1787). It is included here for the sake of the relation it may have to 2294.

The hand is of the angular type. This specimen may be compared with e.g. 232 and dated in the late second or third century.

]ρηονθαλαμωτωδες[]ις ευποδανύμφαναβ[] . νυνδ[]νμοι ·[]αςγε .[

1 τ headless $\varsigma[$, ϵ and perhaps β possible 3], the top of an upright 5.[, the top left-hand arc of a small circle

5

^{2]}ρηον: presumably the end of an adjective in -ηος, -ηων (Attic -ειος, -ειων).

³ εὔποδα νύμφαν in a line of Sappho at 2294 5.

ADDENDA

1231 (Sappho, Book i), 2081 (c), 2166 (a)

Some subtractions from, as well as additions to, the fragments published under these numbers are to be recorded. **1231** frr. 33, 37, and 46 (which I can assign respectively to their proper manuscripts), 24, 32, 34, 39, 40 clearly, 8 (where read $\alpha \gamma \rho$), 37+47 (which can be joined) most probably, are not attributable to the same hand as the rest. The additions, of which the numbering runs on from **2166** (a), are as follows:

2. Two scraps have been attached to 1231 fr. 1 i so that ll. 19-24 ($\Sigma\mu$. \bar{a} 5, 7-12) are now to be read:

]κα ^λ .[] ωπωνελεν []νανδρα	κάλ'λ'ος [ἀνθ]ρώπων Ἐλένα []ν ἄνδρα
20]70.[]. ατον	τὸν []ιςτον
] $a\lambda\lambda$ [] εβας τροϊανπλεοι[]	καλλ[ίποι]ς' ἔβα 'ς Τροΐαν πλέοι[ςα]
	κὼυδ[<u> </u>	κωνδ $[\grave{\epsilon}$ πα $]$ $\hat{\iota}$ δος οὐδ $\grave{\epsilon}$ φίλων το $[\kappa]\acute{\eta}$ ων
]a[]εμνάςθ'αλλαπαρά . γ'αυταν	πα[]εμνάςθη ἀλλὰ παράγαγ' αὔταν
	```	]cav κτλ.	` ]cav

21 Above  $\epsilon$  there is a worm-hole, on the right-hand side of which there is the right-hand arc of a small circle, which looks like part of the sign of elision. I cannot explain it. It seems most natural to suppose that  $\tilde{\epsilon}\beta a$   $\tilde{\epsilon}\epsilon$   $T_{potav}$   $\pi\lambda \acute{\epsilon}o\iota\epsilon a$  is what Sappho meant, but so far as I have observed prodelision is not usually indicated (cf. 2300 fr. 1, 5;  $\lambda\mu$ . 29, 5), so that there is no great probability in the suggestion that  $a\epsilon'\tau$  was written by error for  $a'\epsilon\tau$ .

23 πάμπαν appears suitable.

- 3. A scrap has been inserted in 1231 fr. 1 ii 8 (Σ $\mu$ .  $\bar{a}$  6, 7), which completes  $\tau \dot{\nu} i \delta$ , and another at the end of l. 21 (ib. 20) which gives  $\rho a\pi i \kappa \epsilon$
- **4 A.** A scrap has been prefixed to **1231** fr. 9, 5 (Σ $\mu$ .  $\bar{a}$  9, 5), which is now: ]. ενοκρετηται
- **4B.** A new fragment has been attached below **1231** fr. 19 ( $\Sigma\mu$ . om.) and I think but cannot be certain that no complete line is missing between them. A good deal of the writing, like that of the published piece, is nearly or wholly obliterated. Ll. 8 seqq. now run:

].[.]
$$\lambda\mu$$
[ ].[.].[
] $\nu\tau\epsilon\dots\gamma$ . $\iota$  .[.].[
] $\delta\epsilon$ · [ ]..[..].[
]. $\mu$ .[

8 For  $\mu$  perhaps another  $\lambda$  9 After  $\epsilon$  an upright Before and after  $\gamma$  the tops of circles After  $\iota$  blank space sufficient for 2 letters 10 ]...[, a stroke descending from left, e.g.  $\lambda$ , followed by the left-hand arc of a circle with a trace to its right, e.g.  $\epsilon$  11 ]., the tip of an upright

9 Γοργοι is acceptable but cannot be verified.

5. Two more scraps have been attached to the combination of 1231 frr. 50-4, so that  $\Sigma\mu$ .  $\bar{a}$  15, 2-9 now have the following form:

- 2 The first visible ink seems to be the foot of an upright; possibly no letter is missing between this and the next, represented by the bottom of a stroke well below the line 5 Between  $\theta$  and  $\alpha$  ink which I cannot interpret either as stop or apostrophe 6 A trace over the first apex of the first  $\mu$
- 6 A. A scrap has been attached to 1231 fr. 56 on the right so that ll. 3 seqq. now run:

παννυχιεδο [.]α.[

$$caναειδοι .νφ[$$
 $φαειοκολπω [

 $αλλεγερθειε,ηϊθ[

 $επειχεεοιευμαλι .[

 $γπεροεοναλιγυφ .[

 $νπνον[.]δωμεν [

 $μελων α[

χηηηδδ$$$$$$ 

3 παννυχίεδοι[ε]αι . . . now indicated.

4 I am not sure that there is not room for an  $\iota$  between the doubtful letter and  $\nu$ .  $-c[\iota]\nu$  would appear to suit the context better than  $-\epsilon\nu$ , but the available evidence is against crediting Sappho with  $\nu$  εφελκυττικόν in such employment ( $\Sigma\mu$ . xxxvii, lxxiii).

6 seq. If  $\dot{\eta}l\theta[\epsilon\epsilon$ , the occasion must be the night before the wedding-day. If it is the night of the wedding-day, I suppose  $\dot{\eta}l\theta[\epsilon\omega\epsilon]$  must be preferred. 'Go and', presumably 'summon', or the like, a

future participle

7 seq. After ἐμάλικ[ac I suggest ὡς ἐλάςςω. The reference seems to be to the sleeplessness of the nightingale (Hesiod fr. 203 Rz., App. Prov. iv 41, et al.), but I cannot satisfactorily continue after ἀ λιγύψω[νος. ὅρνις is not very attractive and ἄδω for ἀηδών highly improbable. Procne was an Athenian princess but ἄτθις would be apt in Sappho to be otherwise interpreted. I do not see that Martial's multisona Atthis (i 53, 9) weakens this objection.

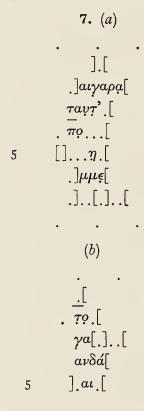

9 [ί]δωμεν: cf. Wasps 91 υπνου δ' όραι . . . οὐδὲ παςπάλην.

### Unattached.

### **1233** (Alcaeus), **2081** (*d*), **2166** (*b*)

To the additions and corrections to 1233 published in 2081 (d) and 2166 (b), the following supplement is to be made. (The numbers are continued from vol. xviii 2166 (b).)

**9.** 1233 fr. 4, I (= B 5, I). A scrap containing the letters  $]co\nu\pi\epsilon\lambda$  has been attached before  $o\pi oc$ .  $\nu\hat{a}]co\nu$   $\Pi\dot{\epsilon}\lambda o\pi oc$  is, therefore, now established.

**10. 1233** frr. 
$$5+6$$
 (= B 6 (a)+(b))+26? frr.  $7$  (= B 6 (c))+2081 (d)  $5$  (= B 6 (e)).

The location of fr. 26 is open to question. It looks as if it might contain the lower parts of the letters of which the tops are contained in fr. 6, 5, but the back being stripped no confirmation is to be had from the vertical fibres and I cannot trace the horizontal fibres of the front with any certainty in and below fr. 7, 3. The other four fragments join by pairs and form a complex, which I think it may be asserted with reasonable confidence comes from the lower part of the same column as fr. 4, though the evidence of the vertical fibres of the back does not enable me to fix the exact width of the gap between the two pairs, which are fixed relatively to one another by the horizontal fibres at the level shown.

I].., the base of a circle followed by the lower part of an upright 4]..., traces on floating fibres; that before  $\nu$  may be from the left-hand arc of a circle 7].[, the tip of an upright 8 Before  $\rho$  a dot level with the tops of the letters After c a narrow blank space Before  $\delta$  two traces on the line; if the second is the foot of  $\iota$ , the first might represent  $\alpha$ , in which case no whole letter would be missing After  $\eta$  traces suggesting either  $\mu$ [ or  $\lambda$  (or  $\chi$ ).[ 9  $\pi \rho \rho \rho \rho \rho$  probable but o not verifiable 10]  $\lambda$  possible, but represented by minimal traces Before  $\eta$  a dot on the line [.], the left-hand arc of a circle cancelled by a diagonal stroke rising from left to right 11  $\kappa$ [., scarcely  $\iota$ , though the vertical stroke is so near the break that nothing is visible on its right. The letter or diphthong immediately following was surmounted by a circumflex, not an acute ].,  $\nu$  seems suggested though represented only by two traces on a single fibre 12 If fr. 26 is wrongly attached, the letter before  $\alpha$ c is represented by a trace level with the tops of the letters and that after them is lost ]., a trace on the line 13].[, a trace apparently too high to be part of a letter in the line 14]., a trace level with the tops of the letters; the acute accent on it now certain 16]., apparently parts of a stroke descending from left to right

The only column of this manuscript of which the number of lines is known contains 40. To make up the same complement 8 lines would have to be lost between the last of 1233 fr. 4 and the first of the newly constituted piece. They seem likely to have been the last two verses of the stanza starting at 1233 fr. 4, 13, the whole of the following stanza, and the first two verses of the stanza ending at 1. 2 above, which is prima facie the last Adonius of the poem in Sapphics. What then follows may be inferred from ll. 9 seqq. to have been a composition in Asclepiads. We have to reckon with the possibilities that it was alined with the preceding piece or that it was written ἐν ἐκθέςει or that it was written  $\epsilon \nu \epsilon i \epsilon \theta \epsilon \epsilon \epsilon \iota$ . If  $\Pi o \lambda \dot{v} \delta \epsilon \nu \kappa \epsilon c$  is to be recognized in l. 5, it must either be the first word of the verse or have been preceded by three syllables. It scarcely seems possible that it can have been the first word, for the single syllable that would then be all that could be missing before e.g.  $\pi \dot{v} \iota \iota a \epsilon$  in l. 9 would have to occupy the space of nearly 5 letters, and similar objections would hold in regard to ll. 8, 10, 11. I can bring no such simple argument against the hypothesis that three syllables preceded it and consequently cannot rule out the possibility that we are here confronted with the long Asclepiad. But in view of the relative ease with which the sense of ll. 10-11 can be filled out on the assumption of a much smaller loss than that implies, I incline to the belief that Πολύ]δευκες is a false clue, that  $\lambda i \pi o \nu \tau \epsilon c$  is actually the beginning of 1. 10 and no more than one syllable missing before the legible parts of ll. 5, 7, 8, 9, 11, and therefore that we are dealing with the short Asclepiad written èv eichécei. But where all the elements on which a decision must be based are so dubious, a statement of the problem is the most that can usefully be undertaken.

5 If not Πολύ]δευκες, perhaps ά]δευκες, but there are other articulations.

9 πότιν ἴπποιτί τε, 'on foot and on horseback'.

10 If λίποντες . . . ἔλθετε, it may be guessed that the instructions were 'leave Lesbos', λίποντες Μάκαρος νᾶςον ἐπήρατον (-άταν), 'and go to the land that K. holds', ἐς γᾶν ἔλθετε, τὰν  $K[\hat{\ }-\ ]$  νέμει, or something not very different.

11. 1233 frr. 
$$13+28 = 3+27$$
.  
fr.  $16 = 3 + (a) + 2166 = 6$ .

These two newly constituted fragments, (b) and (c) below, together with 1233 fr. 10 (= B 1, B2) and 1233 fr. 22+2081 (d) 3 (= B4 (b)), (a) and (d) below, present a problem of location.

(a) contains a joint, and the fibres on the right of this can be traced into each of (b), (c), and (d), which therefore stood on the right of (a). It is, further, reasonable to assume that (b) was nearest of the three to (a), since, when their respective fibres are brought together into correspondence, so also are the lines of writing, which (owing to the dip of the fibres from left to right) is not so with the other two. (c) and (d) certainly belong to different columns, since, being on the same level (that is, fibres and

lines of writing corresponding simultaneously), both contain ends of lines. (b) has also been thought to display a line-end in 1. 5 but I believe this to be illusory. If it is not, at least three, and conceivably four, columns will be represented. If it is, there is no theoretical need to assume more than two (viz. i (a)+(b)+(c), ii (d)), the fibres which run from (a) across (b) having dipped enough to make it possible to bring fibres and lines of writing of (b) and (c) simultaneously into correspondence. The horizontal relations of the four fragments may, therefore, be reasonably supposed to be as shown below. There is no external indication that I see of the intervals between them.

	(a)	<i>(b)</i>			
		 ][			
	1.[	$] au o c \hat{\omega}[$	(c)

			$].\upsilon\mu\pi.[$		].oc

- (b) 3 Before the first  $\epsilon$  a blank space, perhaps due to damage 4. [, a trace compatible with the middle of  $\epsilon$  5 Before the first  $\epsilon$  the right-hand arc of  $\epsilon$  or  $\epsilon$ ; if  $\epsilon$ , preceded by one, if  $\epsilon$ , by two, dots level with the tops of the letters. After the last  $\epsilon$  (which is not of the normal appearance and is preceded by a deleted  $\epsilon$ , not an  $\epsilon$ ) a blank space, but the accent on  $\epsilon$  implies that at least one more syllable must have followed 6 ].[, the tip of a tall upright as of  $\epsilon$  ]..., the top arc of a circle followed by the apex of  $\epsilon$ , or possibly  $\epsilon$ , and this by two traces, level with the tops of the letters, which may represent  $\epsilon$  but may belong to two letters
- (c) I .[,  $\alpha$  would suit but I cannot rule out o 2 .[, the lower left-hand segment of a circle 4 c [ anomalous 5 ]., the right-hand arc of o or  $\omega$  with what looks like a ligature to  $\nu$  but I think must be part of a stroke cancelling the letter 6 ]., the right-hand arc of o or  $\omega$  7 ]., an upright .[, the top of a circle 8 .[, the upper part of a stroke descending to right 9 ]., a trace on the line, possibly  $\lambda$ ; not, I think, c
  - (a) 9 I guess, for καὶ εὐωχ[-

(b) 4 ἐπονάμε[ cf. Άμ. A 5, 9, F 6, 17, inc. lib. 46, 2.

5 I should suppose that some part of  $\gamma \eta \rho \dot{\alpha} c \kappa \omega$ , which has a number of suppletive forms, is to be recognized. It can hardly be the participle  $\gamma \eta \rho \dot{\alpha} c$ , of which the accentuation would presumably be paroxytone in Alcaeus. The future or aorist, if divided between lines, would have to be divided before c.

130

12. 1233 fr. 24+2081 (d) fr. 4. These two fragments join to give:

2081 (d) fr. 6 does not come from this manuscript.

# 1234 and 1360 (Alcaeus), 2166 (c)

To the additions and corrections published in vol. xviii, 2166 (c) and Addenda, the following supplement is to be made. (The numbers run on from vol. xviii 2166 (c) Addenda.)

οὖκ ἀπαταίςει seems reasonably likely.

- I The letters at the beginning of this line appear to be rather larger than the rest. Of the first there remains a tail descending into the second line. Before  $\psi$  a similar tail and above it to the right a stroke ascending from left to right, over which there may be an accent, e.g.  $\acute{v}$ . After  $\psi$  what looks like  $\beta$ , but may be  $\epsilon$  2 After  $\phi\eta(\epsilon w)$  apparently a v-shaped  $\eta$ 
  - 2 Perhaps φίλος δέ, φηςιν, ήςθα but I cannot verify
     3 [καλεῖν, τοῦτ(ο)] seems to give the extent of the gap
  - 5 πο[ιοῦ-ςιν, -νται εὐ]ωχίαν

42. 1360 fr. 17+2166 (c) 10+11+13+14+16+32 (= D 4 (b)+a new fr.)+35. Of 14 only the horizontal relation is certain. The distance between l. 16 and l. 17 cannot be determined.

1360 fr. 15 and 2166 (c) 15, 17, 23 look as if they might come from the same region as 42, but I cannot attach them nor even assign them approximate locations, apart from the first, of which I believe the *level* is correctly shown below.

2  $\iota$  is so close to the break that  $\gamma$ ,  $\pi$  cannot be ruled out Before  $\omega$  apparently the lower ends of two strokes descending from left. Two letters may be represented but it looks as if they would be crushed 3]., a trace level with the tops of the letters 6]., an upright;  $\nu$  not less probable than  $\iota$  7 Of  $\omega$  only the lower right-hand angle 8 Before  $\nu$  a trace suggesting the tail of a 10 After  $\rho$  the tail of  $\nu$  (or perhaps  $\phi$ , but this is metrically difficult) 11]., a trace below the line,  $\rho$  or  $\tau$  suggested In the right-hand margin the first letter (perhaps  $\nu$ ) of a note 12  $\epsilon\chi$  or  $\epsilon\lambda$  would suit 13]., the tip of a stroke rising from left to the bottom of o]., the right-hand tip of a cross-stroke level with the tops of the letters 14.[, an upright ]., a trace level with the tops of the letters Between  $\alpha$  and  $\psi$  the middle of an upright 15]., an upright

What remains of each line is consistent with Ionic trimeters or tetrameters.

3 ι must be itself long or a constituent of a long. No word of the requisite form is attested and I doubt whether ἀλειτό- or ἀλοιτόεργον is consistent with the trace before ι.

10 Between  $ρ_{i}$  and μ there would be room for one letter more than I have shown, if some of the missing letters were narrow. κ] $ρ_{i}$ νε[ $ρ_{i}$ ε], for example, is not ruled out.

11 Presumably φῦται, but φύται not out of the question.

12  $\dot{a}\mu \dot{o}\chi \theta \eta \tau o \nu \, \ddot{\epsilon}\chi \eta \nu \, \delta \dot{\iota} a \iota \tau a \nu$ , which might be said of gods, though l. 14 makes me disinclined to suppose that it is so here.

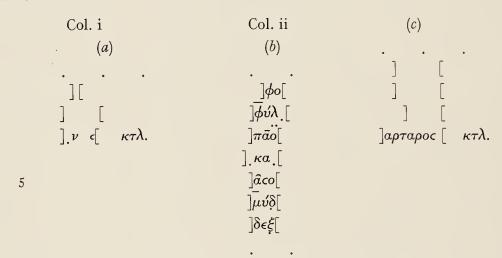

13  $\nu[\delta]\eta\mu[\mu', \epsilon]$  appears to be unavoidable. This leaves only the letter before  $\eta\tau$ 0 to supply and this must apparently be  $\gamma$ ,  $\kappa$ , or  $\tau$ .  $\epsilon\kappa\eta\tau$ 0 is not very attractive but I see nothing else more probable. 14 θά]νατ[ον ζ]ακρυόεν[τα] μάρψαι, cf.  $A\mu$ . B 5, 7 seq., the accusative being the subject of the

infinitive, strikes me as the likeliest of the alternatives.

## 43. 1360 fr. 19 joins below 2166 (c) 12, thus:

]εφοβαμ[ ]βολλ[ κτλ.

44. 2166 (c) 2, &c. A new scrap has been joined to 3, which shows that 3 contains the beginnings of 2 ii, not as was conjectured of 2 i. To this last have been attached 4 and 36 on the left, 2 a and a new scrap on the right. The net result may be exhibited anew as follows:

The first line of (b) may well be the first of the column. If so, the first remaining of (a) and (c) will be the third of the column.

The notes to the right of ] $\mu\alpha\nu$  (formerly 1. 6, now 1. 7) and the following verse now run:

τουτοπε.[...]κ΄τ^η.[
οιςατραπαιφ[ορο]ψειντη[
υποδηματαυπεδης[.],η.[ κτλ.

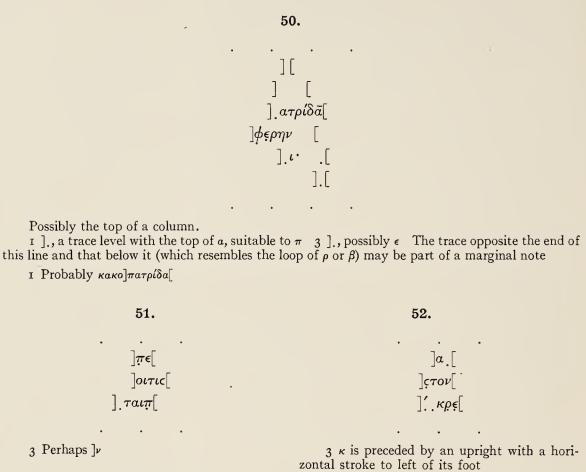

The lines after  $]\pi \alpha \tau \eta \rho$  (now l. 11) are to be written:

- (d) is a detached fragment of which the distance from (a) is not determinable.
- **44 A. 2166** (c) **39** = **1611** fr. 34. A scrap has been attached on the left, giving the beginnings of lines:

3 ]., a dot on the line followed at an interval by the lower part of an upright; perhaps two letters represented. Of  $\delta$  only the bottom left-hand angle; possibly  $\zeta$  4 ]., presumably  $\epsilon$ , but represented only by two dots, one above the other 5 ].[, perhaps two letters represented, of which the second might be  $\eta$  ]., perhaps the extreme upper tips of  $\kappa$  Of  $\epsilon$  only the lower left-hand part 6 ]., the right-hand end of a cross-stroke touching the top of the left-hand upright of  $\eta$ 

Unattached fragments (new):

45.	46.	47.	48.	49.
$\kappa[\lambda][$		]ç.[ ]. ${}^{t}\delta\alpha[$ 1 .[, the start of a stroke rising to right; a,	].[ *	r A dot on the line and an upright descend-

53. 54. 55.  $| au\iota
u|$ ντας ]αςςᾳ[ 2 There is a thin stroke ı Or  $\lambda$ through c, which may denote 3 .[, the bottom left-hand cancellation curve of o or ω

2166 (c) 21 is to be deleted. The truth is to be found in 33.

51.

3 Perhaps ]v

## 1787 (Sappho)

Two new fragments were published in 2166 (d). The following further additions are to be made.

Fr. 6. A scrap has been attached, adding a couple of syllables to the first two verses of  $\Sigma \mu$ .  $\bar{\delta}$  11.

Fr. 7. A new fragment has been attached so that  $\Sigma \mu$ .  $\bar{\delta} g_{6-8}$  now read:

Frr. 11 and 16. Three fragments which appear to come from the same neighbourhood as these were published in  $\Sigma\mu$ .  $\delta$  13–14. I think the following should be associated with them:

I ].[, if one letter,  $\nu$ ; if two,  $\alpha$  or  $\lambda$  followed by an upright Before  $\epsilon$  perhaps  $\kappa$  2.[, prima facie  $\pi$ 

They may be referred to as  $\Sigma \mu$ .  $\bar{\delta}$  14 (d), (e).

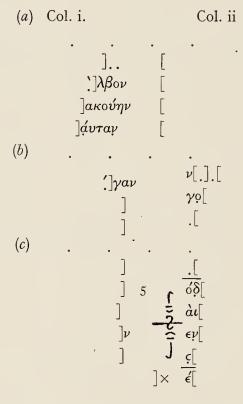

Fr. 25. A scrap joins above, giving the top of the column.

I From the position of it would be inferred that it was the second letter of the line but there is no trace of ink before it except a dot above and to left, like the left-hand dot of a trema 2. [, the start of a stroke rising to right

 $\Sigma\mu$ .  $\bar{\delta}$  15 (c). A couple of letters have been added to ll. 3-5:

3 ...[,  $\kappa\epsilon\tau$  possible, but I now think  $\lambda$  as likely as  $\kappa$ ; of  $\epsilon$  only the foot, so that  $\epsilon$  is an alternative;  $\tau$  represented only by the start of a stroke rising to right 4 .[, if one letter,  $\pi$ , but  $\gamma$ .[ equally acceptable

Frr. 35 and 40 (=  $\Sigma\mu$ .  $\bar{\delta}$  25 (c) and (a)). These two are now linked by a new fragment as shown. The distance between (a) and (b) is uncertain; (b) and (c) probably touch.

Col. ii 1 ].[, on a single fibre a trace of a stroke descending below the line 3 .[, the left-hand side of a circle, perhaps o or  $\omega$ 

The following unpublished fragments appear to be due to the same hand as that which wrote 1787, but since this hand varies considerably and is responsible for a Pindar as well as a Sappho, and for all we know copied other authors as well, there is no certainty that any particular fragment is correctly ascribed on the strength of the writing alone. They may be referred to as 2166 (d) 3-13

3 Of  $\epsilon$  only the top; it is rather close to  $\epsilon$ , but no other letter as likely 8 The tip of a stroke rising to right 9 A short cross-stroke, perhaps not part of a letter

4 If  $\tilde{\alpha}\beta\alpha\nu$ , Sappho is indicated, since this treatment of the  $\eta$  of  $\tilde{\eta}\beta\alpha$  is characteristic of Lesbian, but another scansion and articulation are possible, if Pindar is in question

**5.**]ραςθα.[
]ν .[

#### **1788** (Alcaeus)

1788 fr. 1, 2-4 (= F 1, 6-8)+a new fragment:

] .ιθεςς απυλίμνας πολινες ταν δ[ ]ανεκκορύφανό πποθενευωδες[ ]αύκανψυχρονύδωραμπελόεςς[ κτλ.

Frr. 10+8 (= F 11) may be located with great probability under the new fragment in such a way that fr. 10, 1-3 are level with fr. 1, 6-8 (i.e. F 11, 1-4 level with F 1, 9-12), thus:

but it must be admitted that it is not easy to reconcile this location with the requirements of the metre.

F 1, 12-13+a new fragment:

11 The letter after  $\gamma$  looks like  $\epsilon$  and is presumably  $\epsilon$  with all lost above the cross-stroke. The next letter may then be  $\epsilon$  with the lower part rubbed away to have been corrected. I cannot reconcile the traces with  $\epsilon$  .[, the left-hand upright of  $\gamma$ ,  $\nu$ ,  $\pi$ 

The newly-added scrap shows that I was wrong in attaching the fragment containing F 1, 12–16 directly to that containing F 1, 5–12. I should still locate  $\lambda \iota$  vertically below  $\epsilon \phi$  but the interval between the two fragments is not determinable. I cannot trace any of the fibres into the part of F 11 which might stand opposite, if the location suggested above is correct.

1788 fr. 4, 1–16 (= F 4, 1–18)+2 new fragments. One of them does not actually touch and its distance depends on the correct setting of the interval between the broken  $\lambda$  and the broken  $\omega$  in l. 9.

4 Before o the right-hand part of a cross-stroke as of  $\gamma$  5 Before  $\epsilon$  a trace at mid-letter 6 Before  $\rho$  a dot level with the tops of the letters 7 ].c.[, I am now inclined to think the base of o more likely than that of  $\epsilon$  before  $\epsilon$ , and, if  $\pi$  is to be read after  $\epsilon$ , only one letter lost between  $\pi$  and  $\delta$  i.[.] $\epsilon$ , not more than one letter missing, perhaps not even one 8 Between  $\alpha$  and  $\rho$  a dot about mid-letter 9 Of ] $\alpha$  the extreme lower end of the tail touching  $\epsilon$  10 After o a trace which may be the tip of the overhang of an otherwise rubbed away  $\epsilon$  13 ]. $\alpha$ .[, the right-hand end of a horizontal stroke touching the back of  $\alpha$  at mid-letter. After  $\alpha$  either  $\gamma$  or the left-hand angle of  $\pi$  After  $\epsilon$  no traces but I am not sure this was the end 14 After  $\eta$  a short upright above the level of the letters 16 Of the first letter apparently the lower end of a stroke descending from left 18 Perhaps ] $\alpha$  but ] $\lambda$  or ruled out

4 I see nothing against  $\epsilon \pi \eta [\rho \alpha] \tau \omega [\epsilon]$ 

6 [κ]ούφω δ' ἐπίης δρόμω 'you slacken from your nimble course', you slow down, is an acceptable interpretation of the letters as they stand, if -ηc is admissible for -ηcθα (Aμ. xxvii). But other alternatives present themselves, when one envisages the possibility of omissions of ι adscript.

 $8 - \mu \alpha \tau \sigma c$  must be regarded as most probable but I cannot supply a satisfactory beginning. Though the surface is rubbed, it seems reasonably certain that one must operate with  $\upsilon \pi \dot{a}$  not  $\upsilon \pi \dot{a}$ 

9 The newly acquired ψηλαφ- (before which it is possible that  $\epsilon$  has been lost) indicates - $\beta$ ]άσταςδ. [(a variant or correction of some other form of  $\beta$ αστάζω), as appears from such passages as Suid.  $\beta$ αστάσας ἀντὶ τοῦ δοκιμάσας . . . καὶ  $\beta$ αστάσαι οὖ τὸ ἆραι δηλοῦ παρὰ τοῦς Ἀττικοῦς ἀλλὰ τὸ ψηλαφῆςαι . . . καὶ διαςκέψαςθαι τῆι χειρὶ τὴν ὁλκήν; Polyb. 8, 16, 4 πᾶν ἐβάσταζε πρᾶγμα καὶ πᾶςαν ἐπίνοιαν ἐψηλάφα. The compound διαβαστάζω is also found accompanied by βάρος and ὁλκήν (Lucian Ep. Sat. 33; Plut. Dem. 25).

έο [ίτα] το ἀπαλωτέραιο. For the whole perhaps compare F 6, 15 seq.

II  $\epsilon ]\lambda \epsilon i\beta [\epsilon \tau] o$ 

13 ἀπ[ωλ]εςα (or ca[.])

14 κέρδεο ς

16 I am inclined to see here  $]\Delta io[\epsilon] \kappa a \mu[a] \kappa a [\rho\omega\nu \theta \epsilon \omega\nu]$ , in spite of the present appearance of the ink representing the first letter.

1788 fr. 6, I (= F 4, 28)+a new fragment+fr. 4, 25-6 (= F 4, 27-8). 
$$\underline{\ \ \ } [\cdot] c\check{\alpha}\kappa\bar{\alpha}[\cdot] \cdot o \cdot (\alpha c\kappa\hat{\nu}\mu'\acute{\alpha}\lambda[\cdot]c\epsilon \cdot \cdot [\cdot]\lambda\eta\nu \cdot \\ \underline{\ \ \ \ } [\cdot]\pi\epsilon[\cdot\cdot]\epsilon \cdot \mu\epsilon \quad \kappa\tau\lambda .$$

27 i.e. ἴca κἀς πολίας κῦμ' ἄλος ἐςβάλην 'one might as well throw into the sea'.

33 ...[, an upright followed by what suggests the upper right-hand arc of a small circle on the line and this by the lower part of an upright with a slight slope to right; three letters may be represented, e.g.  $\gamma o \nu$  ]., perhaps  $\nu$  or  $a \iota$ , but very little remains 34 The ink at the end is a horizontal stroke which may not represent a letter 35 The ink at the end of the verse has the appearance of a thick upright with the right-hand arc of a circle of normal thickness touching its left-hand side; perhaps  $]\omega \iota$  marg. Perhaps  $\mathring{a}\kappa a \tau($ ) referring to the preceding line, but what follows does not bear this out. It might be taken as  $\mathring{a}[\nu(\tau \iota \tau o \hat{\nu}) \ \mathring{\epsilon}]\pi \iota \kappa \epsilon \phi[a \lambda$ , but this is quite uncertain 36 Between

 $\iota$  and  $\eta$  room for a narrow letter but  $\iota$ [ $\dot{}$ ] might suffice Part of the letter after  $\eta$  should be visible but the papyrus is blank

35 seq. Perhaps δάκ[ρυτι]ν. If ]λαϊη[, it recalls κλαΐην δάκρυτιν quoted as Aeolic Et. Mag. (Et. Gen.) 574, 65.

Fr. 6, 13-15+fr. 4, 38-40 (=F 4, 40+F 5, 1-2)+3 new fragments.  $F_4, 40 \quad ] \epsilon \rho \epsilon i \epsilon v \phi \circ [ ] a \tau o v ] \dot{a} [$ ] οι^ωτουςιςυφουπροςτοκακειν[ ] ει αι τουτονουγαρ [..] [ F 5, I ]  $\tau \alpha \mu [\ldots] \epsilon \delta \ldots [$ εδοταιεις πιθοντετό[ ]πόντ[ ]νκατελκε [ ] [] [  $]\phi\epsilon\nu\alpha\lambda\dot{\lambda}[]\kappa\lambda\dot{\nu}\nu\sigma[$ F 4, 40 a  $]\pi\pi a[.']$ .occ. $\omega$ .[ 40 b  $]\phi \dot{\iota}\omega,[$   $]..\epsilon.[$ 40 C αλογοςπαρακειται

It was evident for two reasons that there was some error in F 4, 32-40. First, between the last visible paragraphus under l. 31 and the end of the piece there are 9 verses; there ought to be a multiple of four. Secondly, the alternation of the verses has reversed itself between ll. 35-8. It is now to be seen that three verses were omitted and added by the original copyist but in smaller script in the lower margin.

F 4, 40 marg. 1]., the turned-up lower tip of a stroke descending from left 2]., the upper part of a stroke sloping to right Perhaps  $\epsilon\iota\epsilon\theta a\iota$  but of  $\epsilon$  only a dot remains  $\pi$  (i.e.  $\pi\epsilon\rho\iota$ ) may be meant but this does not account for all the ink 3 δε not improbable but not verifiable The

sloping stroke over  $\tau \rho$  may be part of a suspended letter

F 5, 1 After  $\delta$  the middle of a stroke sloping to right followed by traces compatible with the top of  $\kappa$  but perhaps representing two letters, next the lower part of a stroke descending from left, an upright and an angle like the left-hand angle of  $\delta$ ;  $\nu\delta[$ ,  $\lambda\iota\omega[$ ,  $\alpha\kappa[$ , and some permutations of these may be possible interpretations of the last signs but there is something anomalous about each an upright, apparently belonging to the text not the note

F 4, 40 b ]., perhaps  $\chi$  or  $\lambda$  o has a somewhat flattened left-hand side but  $\rho$  seems ruled out 40 c After  $\omega$  a trace of an upright descending below the line ].., perhaps  $v\delta$  After  $\epsilon$  a small arc off the line, e.g. o, c,  $\phi$  marg. ]., a stroke, above the tops of the letters, rising to right

F 4, 40 marg. In the last words of this note I am very much inclined to recognize  $\epsilon i \epsilon \pi l \theta o \nu \tau \epsilon \tau \rho^{\eta}$ i.e. τετρημένον, and, if this is right, it would be reasonable to see a reference to the punishment in Hades of the Danaids and further to conjecture, since the punishment of Sisyphus was different, that οὐ γὰρ . . . παραδέδοται, 'it is not the tradition that Sisyphus had to pour water into a leaky barrel', was what was said. But this would imply that the text commented on introduced this innovation into the legend. I cannot trace it there and κεκαιν[οτο]μη̂cθαι is not what was written between πρὸcτὸ and (περί?) τοῦτον.

40 c The marginal note stands below the level of the last of the verses added beneath the column

but presumably refers to them.

Neither the form nor the use of the critical sign called ἄλογος is precisely known. Here, as at Aristoph. Vesp. 1282 (where Dindorf has mistaken the compendium and ἀλόγους is to be read), it seems to be used with reference to verses omitted though not in themselves questionable.

Didymus is also quoted in the note on v. 20 above.

1788 fr. 15 ii 13-15 (= F 6, 5-7)+a new fragment (itself made up of two scraps which do not quite touch).

F 6, 5 Apparently  $\kappa a i [\gamma \dot{a}] \rho \dot{a} \nu o i \bar{t} [a \epsilon 6]$  No doubt  $\epsilon' \dot{a} \lambda \lambda' \dot{\epsilon} \mu [\epsilon] \theta \epsilon \nu c \dot{v} [$ , though the papyrus is broken so that the sign of elision presumably written between c and a is now lost

1788. Unattached fragments (new).

Fr. 16 1]., on the line the tip of a stroke descending from the left, e.g.  $\alpha$ ,  $\lambda$  [, a stroke rising from the line with a slight slope to the right, e.g. 1 5 A horizontal stroke with the start of a stroke descending from its left end,  $\gamma$  or  $\epsilon$  probable

The fibres of the back strongly suggest that this scrap stood below 1788 fr. 1, 8 (= F 1, 12), so that β was vertically below the a of καδ. I cannot trace the fibres of the front into the fragments presumed to stand (see above, p. 139) to the left and right of it.

Fr. 17 3 ]., the tail of  $\alpha$  or  $\lambda$  Of  $\beta$  only the base 7 Perhaps  $\epsilon_{\tau}$ [, but the  $\epsilon$  is anomalously made and might be a cancelled  $\iota$ ; of  $\tau$  only the left-hand end of the cross-bar

On the strength of the fibres of the back I should assign this fragment to a position above the right-hand side of 1788 fr. 4, 1 (= F 4, 3),  $\kappa$  vertically over v.

Fr. 18 1 .[, the upper left-hand arc of a round letter 4 The foot of a stroke on the line and the tail of an upright descending below the line 5  $\lambda\nu$  would suit 6 After 0 the middle of a stroke sloping slightly to right followed by a small curve level with the tops of the letters 7]., the top and bottom of an upright descending slightly below the line 8 The tips of two apparently converging strokes

I am fairly confident that this fragment stands above the right-hand side of 1788 fr. 6 (= F 4, 28+a new fragment, see above, p. 141), but I cannot trace the fibres into the part of F 4 above l. 26 to the left of which I should conjecture it was situated.

Fr. 19
. .
]. ηον· [
] εχάνις .[
]. ωντὼπα[
]. κάμ' άν[
5 ] αςςων[
] εν·κήν[

Fr. 19 1], the top of an upright,  $\nu$  possible one would expect to see more of the left-hand side from the left,  $\alpha$  or  $\lambda$  more probable than  $\kappa$  or  $\chi$ 2 .[, a horizontal stroke on the line; if  $\delta$  or  $\omega$ , 3 ]., on the line the end of a stroke descending 4 ]., the top of an upright

The papyrus is much darker than in the other fragments.

Fr. 20 The level of (b) relatively to (a) is fixed with certainty by the cross-fibres and I believe nothing is missing between (a) and (b) in ll. 7-10, though l. 7 presents on this hypothesis a problem to the solution of which I have no contribution to make. I am also fairly confident that the level of (c) relatively to (a) is as shown, though at the interval between them to be postulated—(c) must stand clear to the right of (b)—there cannot be the same certainty in tracing the fibres across.

(a) 2]., the lower half of  $\chi$  or possibly  $\lambda$  (c) 3. [, the lower part of a stroke sloping slightly to right (b) 5]. [, ink that has soaked through on the underlayer (b) 6]., perhaps the right-hand edge of o (a) 7]., perhaps o likeliest, but anomalous (b) 7..., the lower right-hand arc of a small circle well off the line,  $\rho$  suggested; followed by what most resembles  $\epsilon$ , rather taller than the others and with a longer upturn of the foot, so that a damaged  $\theta$  may be a possible alternative (b) 8. [, perhaps the top left-hand corner of  $\epsilon$  (b) 9 Only the right-hand edge of  $\hat{}$ ; could be read instead (a) II. [, a trace apparently representing a stroke descending below the line (b) II. [, a loop on the line,  $\alpha$  or, less probably,  $\epsilon$  or o

I see no conclusive evidence that these three scraps are rightly assigned to the Alcaeus in 1788.  $]\mu l\tilde{\alpha}\rho[$  in l. 6 would be such evidence, if it were certainly a form of  $\mu\iota\alpha\rho\delta c$ , in virtue of the retracted accent, but an alternative articulation is possible.  $\delta\epsilon\kappa\epsilon\tau\alpha\iota$ , l. 8, and  $\pi\epsilon\tau\alpha[$ -, l. 11, are Pindaric, as well as Lesbian, spellings. Either  $i\bar{l}$  $\pi\epsilon\rho$  or  $\pi\epsilon\rho$ - may have occurred in l. 11. I am not sure whether  $\delta c$ , if it signifies  $\delta c$ , is an argument against the identification of Alcaeus.

The possibility that these lines should be assigned to an unpublished Pindar must be left open. The hypothesis that (a) and (b) touch produces awkward collocations in ll. 6 seq. μίαρ[ο...]ο δερτ[ρ- is not impossible, but not particularly attractive. κήτεος δεδε[ cannot, in my judgement, be made out of the remains. κήτερεος οτ κήτερθος, which could be made out of them, conveys nothing to me. Even if τερεος were accepted (and these letters, which are all on the same piece, might represent the genitive of τέρας, Alcaeus being credited with the corresponding plural τερέων, Άμ. 187), the isolated κή presents a problem as intractable as ever. It may be worth while to add that Κήτειος, which Alcaeus is recorded to have used for Μυςός, Άμ. 177, cannot be elicited on any reasonable assumption that I see.

#### 1789 (Alcaeus)

To the additions and corrections published in vol. xviii 2166 (e) the following supplement is to be made. (The numbers run on from 2166 (e).)

10. 2166 (e) 9+2166 (e) 1+a new fragment.

1-2 on a detached fragment, but I am fairly confident of the location 5 Before  $\epsilon$  the lower part of an upright on the line preceded by the tail of a letter descending below the line,  $\phi \rho \epsilon$  probable

6 No doubt  $\phi \rho \epsilon[\nu]$  ac followed by  $\check{a}\lambda\lambda a\iota c$  somewhere in the next line. For the schol., of which the recognizable part says ' $a\lambda\lambda a\iota c$  with a long  $\bar{a}$ ' and another hand has added 'i.e.  $\mathring{\eta}\lambda\epsilon\acute{a}c$ ', see 2297 fr. 28, 2.

11. 2166 (e) 2+a new fragment.

5 .[, perhaps the top left-hand arc of a round letter

**12.** 1789 frr. 29+16 (= A 10) + a new fragment.

**1789.** Unattached fragments (new).

I ]., the foot of an upright with a hook to the left, neither  $\iota$  nor  $\nu$  quite satisfactory. Between a and  $\lambda$  apparently the lower right-hand arc of a round letter .[, the left-hand side of a round letter 2 ].[, a horizontal stroke as of  $\gamma$ ,  $\pi$ ,  $\tau$  Before  $\phi$  the foot of an upright 3 ]., traces compatible with  $\nu$ 

Above  $\omega$  interlinear ink which might be interpreted as  $\cdot \alpha \cdot$  or possibly ", though this leaves a spot unaccounted for.

This scrap evidently comes from the same neighbourhood as 1789 fr. 24-26+34 (= A 1), I should guess below it so that  $\lambda \nu$ . [ stands vertically below ] $\nu'\hat{\omega}$ [. Further, 1789 frr. 35 and 37 cannot have been far away.

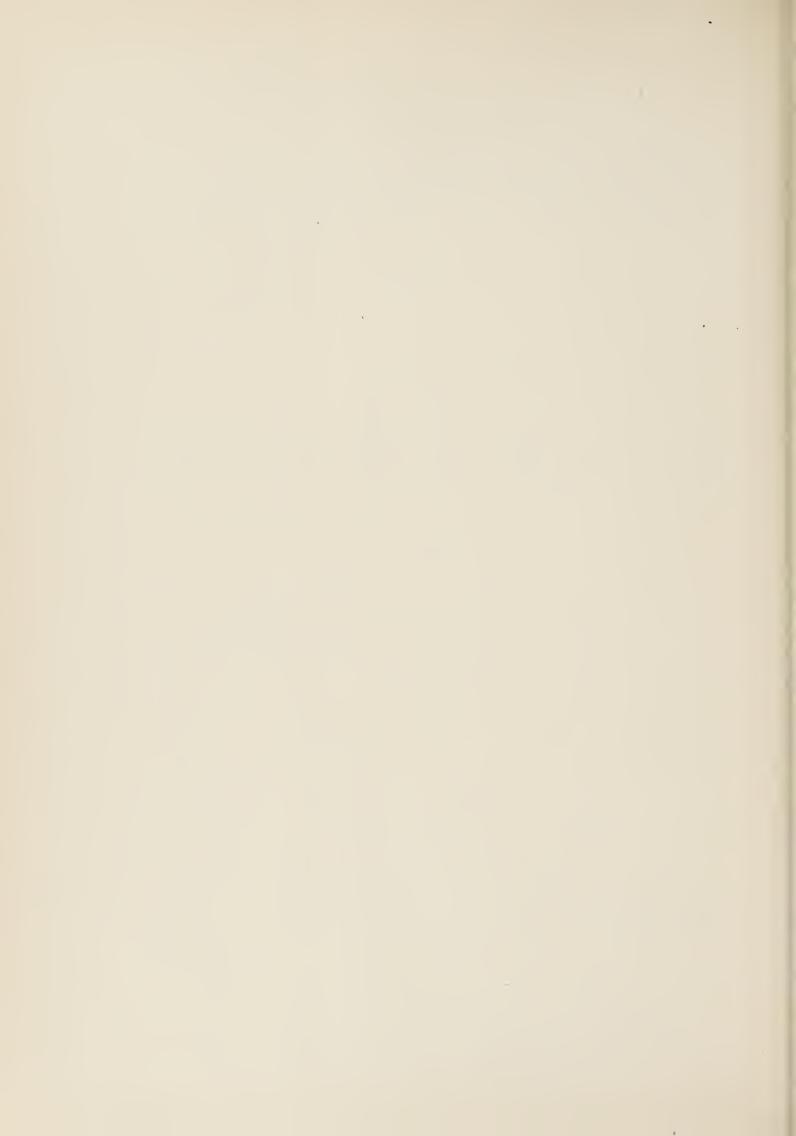

14.

]' $\dot{c}\delta\iota\kappa\epsilon$ [

]., the top of  $\epsilon$  or o

**15.**
